MULTIPLE CHOICE On the line at the left of each statement, write the letter of the choice that best completes the statement or answers the question.

1. _____ If an ideal gas does positive work on its surroundings,
 - a. the temperature of the gas increases.
 - b. the volume of the gas increases.
 - c. the pressure of the gas increases.
 - d. the internal energy of the gas decreases.
2. _____ Sunlight strikes an ice cube at its melting point and causes it to melt. What is this process?
 - a. adiabatic process
 - b. isothermal process
 - c. isobaric process
 - d. isovolumetric process
3. _____ Which of the following processes for an ideal gas system has an unchanging internal energy and a heat intake that corresponds to the value of the work done by the system?
 - a. isothermal process
 - b. isobaric process
 - c. adiabatic process
 - d. isovolumetric process
4. _____ How is conservation of internal energy expressed for an isovolumetric system?
 - a. $Q = W = \Delta U = 0$; $U_i = U_f$
 - b. $Q = 0$; so $\Delta U = -W$
 - c. $\Delta T = 0$, so $\Delta U = Q - W = 0$, so $Q = W$
 - d. $\Delta V = 0$, so $P\Delta V = 0$ and $W = 0$, so $\Delta U = Q$
5. _____ A 4 mol ideal gas system undergoes an adiabatic process in which it expands and does 20 J of work on its environment. What is its change in internal energy?
 - a. -20 J
 - b. -5 J
 - c. 0 J
 - d. 20 J
6. _____ According to the second law of thermodynamics, the heat received by a heat engine operating in a complete cycle from a high-temperature reservoir

Spekkens, 2015-12-08

This book provides the first unified overview of the burgeoning research area at the interface between Quantum Foundations and Quantum Information Topics include operational alternatives to quantum theory information theoretic reconstructions of the quantum formalism mathematical frameworks for operational theories and device independent features of the set of quantum correlations Powered by the injection of fresh ideas from the field of Quantum Information and Computation the foundations of Quantum Mechanics are in the midst of a renaissance The last two decades have seen an explosion of new results and research directions attracting broad interest in the scientific community The variety and number of different approaches however makes it challenging for a newcomer to obtain a big picture of the field and of its high level goals Here fourteen original contributions from leading experts in the field cover some of the most promising research directions that have emerged in the new wave of quantum foundations The book is directed at researchers in physics computer science and mathematics and would be appropriate as the basis of a graduate course in Quantum Foundations Scientific and Technical Aerospace Reports, 1995-08 **High Pressure Phenomena** R.J. Hemley, G.L. Chiarotti, M. Bernasconi, 2002-11-29

In many respects the science of materials has only fully utilized two of its three fundamental tools the variables of temperature and chemical composition Pressure the third fundamental variable altering materials is in many ways the most remarkable as it spans some 60 orders of magnitude in the universe High pressure science has experienced tremendous growth particularly in the last few years With recent developments in static and dynamic compression techniques extreme pressure and temperature conditions can now be produced and carefully controlled over a wide range Moreover a new generation of analytical probes many based on third generation synchrotron radiation sources have been developed and can now be applied for accurate determination of the structural dynamical and electronic properties of matter under extreme conditions Finally developments in computational techniques and advances in fundamental theory tested against bountiful new experimental results are both deepening our understanding of materials as a whole and guiding subsequent experimental work with new predictions It was for this reason that this course on high pressure science was held at the International School of Physics Enrico Fermi School in July 2001 Though presented in a physics forum the title High Pressure Phenomena was chosen to reflect the broad scope of the field and the diversity of recent findings Indeed the field spans fundamental physics and chemistry materials science and technology the geosciences planetary science and astrophysics as well as biology The highly interdisciplinary character of the field was central to the organization of the school though the sheer breadth of the field meant that many topics could be treated in only a cursory fashion while others were

examined more in depth The aim of the school was to present the state of the art in techniques used in modern high pressure research highlighting those topics where applications of these techniques are currently having a major impact *Technical News Bulletin* ,1967 Technical News Bulletin of the National Bureau of Standards United States.
