**PAHs and Related Compounds** Alasdair N. Neilson, 2013-11-11 Environmental Chemistry is a relatively young science Interest in this subject however is growing very rapidly and although no agreement has been reached as yet about the exact content and limits of this interdisciplinary discipline there appears to be increasing interest in seeing environmental topics which are based on chemistry embodied in this subject One of the first objectives of Environmental Chemistry must be the study of the environment and of natural chemical processes which occur in the environment A major purpose of this series on Environmental Chemistry therefore is to present a reasonably uniform view of various aspects of the chemistry of the environment and chemical reactions occurring in the environment The industrial activities of man have given a new dimension to Environmental Chemistry We have now synthesized and described over five million chemical compounds and chemical industry produces about hundred and fifty million tons of synthetic chemicals annually We ship billions of tons of oil per year and through mining operations and other geophysical modifications large quantities of inorganic and organic materials are released from their natural deposits Cities and metropolitan areas of up to 15 million inhabitants produce large quantities of waste in relatively small and confined areas Much of the chemical products and waste products of modern society are released into the environment either during production storage transport use or ultimate disposal These released materials participate in natural cycles and reactions and frequently lead to interference and disturbance of natural systems

**Climates of the British Isles** Elaine Barrow, Mike Hulme, 2014-01-14 Our understanding of climate and its role in human affairs has changed markedly over recent years as have climate observation systems and modelling capabilities Reliance on recent weather statistics to provide a guide for future climate is no longer viable Evidence of human induced climate change has placed climate high on political and the media agendas Climates of the British Isles provides a comprehensive account of what we know about climate and changing climates at the end of the twentieth century Integrating the historical and geographical dimensions of climate the crucial link between past and future climatic conditions is examined through the geographical lens of the British Isles Climates of past ages are reconstructed and full descriptions of present climate are illustrated by a wealth of graphs maps and images Important climate data sets are provided Marking the twenty fifth anniversary of the internationally acclaimed Climatic Research Unit this book distils much of the leading research of present and recent members of the unit and presents an authoritative accessible view of climatic change and prospects for the next millenium and beyond
