The book transitions into neurobiological based topics such as biomarkers, age related structural changes in the brain and current models of accelerated aging in mental health. Clinical topics include dementia, neuropsychology, psychotherapy, psychopharmacology, mood disorders, anxiety, schizophrenia, sleep disorders and substance abuse. The book closes with current and future trends in geriatric mental health including the brain functional connectome, repetitive transcranial magnetic stimulation (rTMS), technology based interventions and treatment innovations. Identifies factors influencing mental health in older adults. Includes biological, sociological and psychological factors. Reviews epidemiology of different mental health disorders. Supplies separate chapters on grief, schizophrenia, mood, anxiety and sleep disorders. Discusses biomarkers and genetics of mental health and aging.
