Solutions Journalism Bill Dodd, 2021-02-15

As audiences avoid negative news and public risk perceptions fracture across polarized media ecologies journalists are being called upon to tell engaging and optimistic stories about the future Consequently solutions journalism has moved from the margins to the global mainstream resulting in a plurality of new solutions focused practices *Solutions Journalism News at the Intersection of Hope Leadership and Expertise* explores the professional dynamics and tensions concerning solutions journalism clarifies these related practices and in so doing provides scholars and journalists with a nuanced appreciation of the opportunities and liabilities of reporting solutions Drawing upon a year long study of journalism in Tasmania Bill Dodd develops a tripartite theory of solutions journalism at the intersection of three core concepts hope leadership and expertise In Australia's lagging southernmost province where development propositions have sparked global protest movements New Tasmania represented a newly optimistic spirit of bipartisanship Yet in this book a close reading of solutions focused discourse reveals deeper asymmetries regarding whose voices are routinely privileged in framing the future On this basis the book argues for a solutions journalism founded on a nuanced understanding of hope and a plurality of community leaders and practical expertise

Vision and Goal-Directed Movement Digby Elliott, Michael Khan, 2010-02-05 Vision and Goal Directed Movement Neurobehavioral Perspectives is also available as an e book The e book is available at a reduced price and allows readers to highlight and take notes throughout the text When purchased through the Human Kinetics Web site access to the e book is immediately granted when the order is received To interact with the environment an individual must code store and translate spatial information into the appropriate motor commands for achieving an outcome Working from this premise Vision and Goal Directed Movement Neurobehavioral Perspectives discusses how visual perception attention and memory are linked to the processes of movement preparation and execution With contributions from active researchers in movement science

Vision and Goal Directed Movement presents the latest theories on the utilization of vision in goal directed movement control. As a resource for motor control and motor learning researchers, students, educators, and clinicians, Vision and Goal Directed Movement offers the following:

- Comprehensive coverage of current behavior based literature on the visual control of goal directed movement.
- A systematic explication of the sensory and physiological processes and systems responsible for fast, accurate, and efficient performance.
- A solid foundation for further study of the sensory and neural systems responsible for precise goal directed behavior.
- A discussion of how current research on vision and goal directed movement can assist in creating efficient and safe work environments.

Using research informed by neural imaging and magnetic brain stimulation, this text provides readers with a better understanding of the neural foundations for goal directed movement, illustrates the flexibility of the human visuomotor system, and discusses how regulation of movements depends on the learning and developmental history of the performer. It begins by reviewing the works of R. S. Woodworth and the influence of his theories on current research. The majority of the chapters in the first section of the book take a behavioral and process oriented approach to exploring goal directed movement. The text then explores the sensory and neural foundations for goal directed action, including issues related to both pursuit and saccadic eye movements, as well as discussion of the specialization of various cortical systems for the regulation of movement. Especially relevant to professionals and scientists concerned with skill instruction and rehabilitation, the final part of the text provides a review of recent research on how and why limb control changes occur with practice and development. In addition, Vision and Goal Directed Movement considers how the research presented can maximize precision, efficiency, and safety in workspace design.

Vision and Goal Directed Movement: Neurobehavioral Perspectives adds a unique offering to the literature base for motor behavior, demonstrating how advances in both behavioral and neurophysiological methods can inform theories related to the biological systems contributing to skilled performance.
