MDOT Implementation Plan for Global Positioning Systems (GPS) Technology in Planning, Design, and Construction Delivery John J. Hannon, 2010 **Transportation Resource Management for Rural Elected Officials**, 1985 **Bridge Safety** United States. General Accounting Office, 1988 **Small Transit System Management Handbook**, 1985 **Best Practices of MDOT'S Survey Operation, Organization and Technology Implement**, 2012

A critical activity performed by employees of the Mississippi Department of Transportation is surveying. Surveying in some instances needs to be performed in hazardous environments such as rugged terrain and high speed traffic. New surveying technologies i.e. Global Positioning System are increasingly being adopted by surveying units of departments of transportation around the nation because it has demonstrated increased efficiency and cost savings in topographical surveys Uddin 2008 Hall 2006 Krugler 2006 NCHRP2004 MDOT2002 MDOT employees use a wide range of surveying methods and technologies throughout the state. Surveying operations vary within MDOT from manual conventional surveying technology requiring large numbers of field personnel to GPS and robotic technologies that are faster and require fewer employees to deploy. The technology methodology standards quality controls and delivered results of these surveying operations need to be catalogued and evaluated to determine the best operational approach to use for the range of surveying operations employed by MDOT. In addition surveying at the district level within MDOT is organized in many different ways. For example in some districts surveying teams are centralized with most jobs filled by the main office while in other districts surveying tasks are spread among numerous field offices. These organizational strategies need to be studied to determine the most efficient organizational model process for MDOT surveying operations. Some MDOT locations have embraced modern surveying technologies such as GPS RTK systems robotic total stations automated field data collection and CADD modeling procedures with great success. Others have been slower to adopt the newest technology and have had less success in field deployment. A study is needed to determine the best adoption strategies including potentially targeted training field demonstration new equipment phase in strategy and computerized work flow for most effectively rolling out new surveying technologies ex GPS to all MDOT districts. The overall goal of this project was to evaluate the surveying processes throughout MDOT to move toward providing electronic 3D surveys improve accuracy and increase efficiency in MDOT survey efforts. This goal was achieved by targeting each district office to determine

- 1 Best operational approach to use a range of surveying technologies
- 2 Most effective organizational model process to best utilize the newest surveying technologies and
- 3 Best roll out strategy

which will help MDOT districts move to the most efficient surveying technology *Small Transit System Management Handbook* Grovenor Grimes, 1986 Michigan Small Transit System Management Handbook.
