From Bulk to Structural Failure: Fracture of Hyperelastic Materials Philipp Laurens Rosendahl, 2020-12-01 This thesis investigates the fracture of nearly incompressible hyperelastic media It covers the different characteristics of bulk material failure under dilatational or distortional loads and develops a unified description of the corresponding failure surface It proposes a coupled strain and energy failure criterion for the assessment of notch induced crack nucleation and

presents a weak interface model that allows for efficient stress strain and failure analyses of hyperelastic adhesive lap joints Theoretical concepts for the measurement of fracture properties of nonlinear elastic materials are provided The methodology is developed using two exemplary hyperelastic silicones DOWSIL 993 Structural Glazing Sealant and DOWSIL Transparent Structural Silicone Adhesive and is validated using large sets of experiments of different loading conditions

Fiber Fracture M. Elices, J. Llorca, 2002-11-15 The idea for this book came out of the EURESCO Conference on High Performance Fibers Euroconference on Fiber Fracture in 2000 Many of the books that are currently available look at different aspects of fiber processing properties or applications but none are focussed on the fracture behaviour of fibers This book presents the mechanisms and models of fiber fracture currently available for both natural and synthetic fibers and it is expected that increasingly there will be cross fertilization between the fields opening new frontiers in academic research and more competitive products for industry It covers the following areas of fiber fracture ceramic fibers glass fibers carbon fibers metallic fibers and thin wires polymeric fibers and carbon nanotubes
