Segmentation of Hand Bone for Bone Age Assessment Yan Chai Hum,2013-05-25 The objective of this Brief is to provide a solution to the unsolved technical problem in segmentation for the automated bone age assessment system The task is accomplished by first applying the modified histogram equalized module then applying the proposed automated anisotropic diffusion technique It is followed by a novel fuzzy quadruple division scheme to optimize the central segmentation algorithm and then an additional quality assurance scheme The designed segmentation framework works without demanding scarce resources such as training sets and skillful operators The results have shown that the designed framework is capable of separating the soft tissue and background from the hand bone with high accuracy This Brief should be especially useful for students and professional researchers in the Biomedical and image processing fields Redesigning Petroleum Taxation

Emre Üşenmez,2018-10-15 Since its inception some 40 years ago petroleum specific taxation in the UK has been subject to numerous modifications Often these modifications were brought into place not only to sufficiently incentivise the investors but also to capture a fair share for the government However it is evident from the frequency of changes that finding the right balance between these two aims is no easy matter Such a balance and the consequent fiscal stability is necessary for the long term relationship between the parties to endure to their mutual benefit Still it does not take much for one or other party to feel that they are out of balance As a consequence one party feels that the other party is taking an undue proportion of the value generated and that they are losing out Yet achieving that balance and fiscal stability is possible To understand this possibility this book first clarifies what is meant by sufficient incentivisation and fair share before developing a new fiscal system that manages this balance and stability Such clarification yields objective criteria against which to assess not only the existing regime but also the newly proposed regime This approach is further complemented by the critical analysis of the fiscal legislative framework and the evaluation of the legal positions of specific contractual elements and mechanisms found within that framework This latter analysis is important in order to reduce the legal uncertainty such elements may create which can otherwise lead to further reactive amendments and revisions to the fiscal regime in the future Multi-Market

monopoly and related anti competitive behavior but are essential to explicating antitrust economics from a mainstream Western economic vantage
