**Graphs:**

- can provide an overview of the function
- can be used to find the domain and range of a function
- can be used to find the x and y intercepts of a function
- can be used to find the maximum and minimum of a function
- can be used to find the points of intersection of two functions

**Equations:**

- can provide a function without having to graph it
- can be used to find the domain and range of a function
- can be used to find the x and y intercepts of a function
- can be used to find the maximum and minimum of a function
- can be used to find the points of intersection of two functions

**Check Your Understanding**

1. A graph of  $y = f(x)$  is shown below.

a. What is  $f(2)$ ? **2**

b. What is  $f(4)$ ? **3**

c. What is the function value of  $f(x)$  when  $x = 0$ ?

**$x = 0$  then  $f(x) = 0$**

2. Use this graph to answer the question. The number of people in the area 1000 feet from a house after the house is open. Interpret each of the following statements in context.

a.  $1000 = 0$

**When the house is open, 0 people are in the area 1000 feet from the house.**

b.  $1000 = 1000$

**The number of people in the area 1000 feet from the house is 1000.**

3. Scientists have discovered that there is a pattern, or rule, that can determine the heading distance a car travels in the air's speed when the car's speed is 10, and then double the speed to 20.

a. Use this rule to predict the heading distance of a car moving through the air.

**100 ft**

b. Write an equation for this that represents the car's heading distance when driving at a speed of  $x$  miles per hour.

**$f(x) = \frac{x^2}{10}$**

c.  $1000 = 1000$

**When the house is open, 1000 people are in the area 1000 feet from the house.**

d.  $1000 = 10$

**When the house is open, 10 people are in the area 1000 feet from the house.**

Wood, Janis M. Harmon, 2001 *Math Wars* Carmen Latterell, 2004-12-30 This book is written for parents and other interested parties so that they can understand the great debate taking place in many states in this country about how to teach basic math. The debate centers around the standards written by the National Council of Teachers of Mathematics (NCTM) which call for a radically different approach to mathematics education. Because the issues are so heated between the NCTM-oriented curricula and traditional curricula, the curricula that NCTM-oriented replaced the term Math Wars was coined to describe them. Parents are concerned about their children's math learning. Teachers are concerned about math teaching. When parents see what children are bringing home under the new curriculum, it is clear that their children are not working on the same mathematics that parents remember from the time when they were in school. But the problem goes beyond grades K-12. Post-secondary mathematics courses are the fear of many students. The standards created by the NCTM do not necessarily prepare students for success either on SATs or in college. Besides lack of knowledge about mathematics education, many parents have an additional problem in that they feel they lack knowledge in mathematics itself. This is very intimidating, thus it is difficult for parents to do anything about the confusing state of mathematics education. This book provides some answers. *Annual Catalogue of the University of Kansas* University of Kansas, 1976 **Popular Science**, 2005-09 Popular Science gives our readers the information and tools to improve their technology and their world.
