Individuals with beneficial adaptations will live longer and have more offspring
11. List and describe the four main principles of natural selection.
Variation - differences exist between members of a population
Overproduction - many extra offspring raises chance that some will survive
Adaptation - certain variations allow some to survive better
Descent with modification - over time, natural selection results in species with beneficial adaptations
12. How are fossil, anatomy, embryology, vestigial, and genetic evidence in support of evolution?
Fossils - showed organisms changing over time
Anatomy - similar structures indicates possible common ancestor
Embryology - similar embryos suggest possible common ancestor
Vestigial - remnant structures suggest function in older ancestor
Genetic evidence - similar DNA or proteins suggest common ancestor
