Innovation Beyond Technology Sébastien Lechevalier, 2019-08-02 The major purpose of this book is to clarify the importance of non technological factors in innovation to cope with contemporary complex societal issues while critically reconsidering the relations between science technology innovation STI and society For a few decades now innovation mainly derived from technological advancement has been considered a driving force of economic and societal development and prosperity With that in mind the following questions are dealt with in this book What are the non technological sources of innovation What can the progress of STI bring to humankind What roles will society be expected to play in the new model of innovation The authors argue that the majority of so called technological innovations are actually socio technical innovations requiring huge resources for financing activities adapting regulations designing adequate policy frames and shaping new uses and new users while having the appropriate interaction with society This book gathers multi and trans disciplinary approaches in innovation that go beyond technology and take into account the inter relations with social and human phenomena Illustrated by carefully chosen examples and based on broad and well informed analyses it is highly recommended to readers who seek an in depth and up to date integrated overview of innovation in its non technological dimensions

Planning and Design for Sustainable Urban Mobility Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world s leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities

Geospatial Technologies and Geography Education in a Changing World Osvaldo Muñiz Solari, Ali Demirci, Joop van der Schee, 2015-08-31 This book is an initiative presented by the Commission on Geographical Education of the International Geographical Union. It focuses particularly on what has been learned from geospatial projects and research from the past decades of implementing geospatial technologies (GST) in formal and informal education. The objective of this publication is to inform an international audience of teachers, professionals, scholars, and policymakers about the state of the art and prospects of geospatial practices (GPs) as organized activities that use GST and lessons learned in relation to geographical education. GST make up an advanced body of knowledge developed by practitioners of geographic information systems (GIS), remote sensing (RS), global positioning systems (GPS), and digital cartography (DC). GST have long been applied in many different sectors; however, their first use in higher education began in the early 1980s and then diffused to secondary schools during the 1990s. Starting with GIS and RS, it evolved into a much broader context as GST expanded to include GPS and DC with new communication technologies and Internet applications. GST have been used around the world as a combination of tools and special techniques to make research, teaching, and learning more effective.

The Geography of Uzbekistan Lola Gulyamova, 2022-12-02 This book describes the geography of Uzbekistan and its unique history and culture. It focuses on the development of Uzbekistan as a result of its location on the crossroads of the Silk Road. The influence of global and regional environmental challenges on the current landscape and similar issues are discussed and analyzed from a historical perspective. Contemporary tensions and reforms in social, economical, and cultural life are described with the aim to draw a picture of modern paths to transformation and development. The Geography of Uzbekistan includes also information on geology, nature, and natural resources, in particular water. The book discusses the social and environmental impacts of the Aral Sea disaster and shows new paths of transformation and development for this Central Asian country.

Green Keynesianism and the Global Financial Crisis Kyla Tienhaara, 2018-04-17 It is widely accepted that limiting climate change to 2°C will require substantial and sustained investments in low-carbon technologies and infrastructure. However, the dominance of market fundamentalism in economic thinking for the past three decades has meant that governments have generally viewed large spending programs as politically undesirable. In this context, the Global Financial Crisis (GFC) represented a huge opportunity for proponents of public investment in environmental projects or Green Keynesianism. This book examines the experience of Australia, Canada, Japan, Korea, and the United States with Green Keynesian stimulus programs in the wake of the GFC. Unfortunately, on the whole, the cases do not provide much optimism for proponents of Green Keynesianism. Much less funding than was originally allocated to green programs was actually spent in areas that would produce an environmental benefit. Furthermore, a number of projects had negligible or even detrimental environmental outcomes. While the book also documents several success stories, the research indicates overall that more careful consideration of the design of green stimulus programs is needed. In addition to concrete policy advice, the book provides a

broader vision for how governments could use Keynesian policies to work toward creating an ecological state This book will be of great interest to students and scholars of environmental politics environmental economics political economy and sustainable development **People of Color in the United States** Kofi Lomotey,Pamela Braboy Jackson,Muna Adem,Paulina X. Carson,J. Elmo Rawling III,J. Michael Daniels,John W. Attig,2019-11-04 Over the course of his 43 year career James C Knox conducted seminal research on the geomorphology of the Driftless Area of southwestern Wisconsin His research covered wide ranging topics such as long term land scape evolution in the Driftless Area responses of floods to climate change since the last glaciation processes and timing of floodplain sediment deposition on both small streams and on the Mississippi River impacts of European settlement on the landscape and responses of stream systems to land use changes This volume presents the state of knowledge of the physical geography and geology of this unglaciated region in the otherwise glaciated Midwest with contributions written by Knox prior to his passing in 2012 and by a number of his former colleagues and graduate students **British Columbia's Borders in Globalization** Nicole Bates-Eamer,Helga Kristín Hallgrímsdóttir,2021-11-24 This book is a case study collection examining the influences and functions of British Columbia s BC borders in the 21st century British Columbia s Borders in Globalization examines bordering processes and the causes and effects of borders in the Cascadian region from the perspective of BC The chapters cover diverse topics including historical border disputes and cannabis culture and identity the governance of transboundary water flows migration and preclearance policies for goods and people and the emerging issue of online communities The case studies provide examples that highlight the simultaneous but contradictory trends regarding borders in BC while boundaries and bordering processes at the external borders shift away from the territorial boundary lines self determination local politics and cultural identities re inscribe internal boundaries and borders that are

both virtual and real Moreover economic protectionism racial discourses and xenophobic narratives driven by advances in technology reinforce the territorial dimensions of borders These case studies contribute to the literature challenging the notion that territorial borders are sufficient for understanding how borders function in BC and in a few instances they illustrate the nuanced ways in which borders or bordering processes are becoming detached from territory The chapters in this book were originally published as a special issue of the Journal of Borderlands Studies

Steel Odyssey Ohjoon KWON,JOO Choi,Hae-Geon LEE,2024-07-15 In this wide ranging interdisciplinary work the authors draw on history anthropology and materials engineering to present a comprehensive and ambitious examination of the multifaceted roles of iron and steel throughout history and the current and future challenges faced by the steel industry Ohjoon Kwon Joo Choi and Hae Geon Lee provide readers with an in depth understanding of the history of iron and steel and their impact on human society from a materials engineering perspective They begin by describing the characteristics of iron and steel and the history of human use of and interaction with these metals by compiling the fundamental knowledge necessary to understand iron s unique properties and metallurgical phenomena Following this they explain the influence of steel on human society and culture focusing on Industrial Revolution and warfare They also give examples that are rarely discussed elsewhere such as developments in Asia or iron s influence on thought and philosophy using Confucianism and Marxism as examples Readers will then be able to apply this contextual knowledge to address the profound impact of emerging challenges such as global environmental issues and the Fourth Industrial Revolution Despite the technical nature of this book all terminology is fully explained to facilitate better comprehension for those who may not possess an engineering education or a direct interest in metallurgy This book is therefore invaluable not only as a technical book but also as a guide to the development history of human civilization and its future challenges

Rare Earth Frontiers Julie M. Klinger,2018-01-15 Rare Earth Frontiers is a work of human geography that serves to demystify the powerful elements that make possible the miniaturization of electronics green energy and medical technologies and essential telecommunications and defense systems Julie Michelle Klinger draws attention to the fact that the rare earths we rely on most are as common as copper or lead and this means the implications of their extraction are global Klinger excavates the rich historical origins and ongoing ramifications of the quest to mine rare earths in ever more impossible places Klinger writes about the devastating damage to lives and the environment caused by the exploitation of rare earths She demonstrates in human terms how scarcity myths have been conscripted into diverse geopolitical campaigns that use rare earth mining as a pretext to capture spaces that have historically fallen beyond the grasp of centralized power These include legally and logistically forbidding locations in the Amazon Greenland and Afghanistan and on the Moon Drawing on ethnographic archival and interview data gathered in local languages and offering possible solutions to the problems it documents this book examines the production of the rare earth frontier as a place a concept and a zone of contestation sacrifice and transformation
