**Learning That Sticks** Bryan Goodwin,Tonia Gibson,Kristin Rouleau,2020-06-05 In far too many classrooms the emphasis is on instructional strategies that teachers employ rather than on what students should be doing or thinking about as part of their learning What s more students minds are something of a mysterious black box for most teachers so when learning breaks down they re not sure what went wrong or what to do

differently to help students learn It doesn't have to be this way Learning That Sticks helps you look inside that black box Bryan Goodwin and his coauthors unpack the cognitive science underlying research supported learning strategies so you can sequence them into experiences that challenge inspire and engage your students As a result you'll learn to teach with more intentionality understanding not just what to do but also when and why to do it By way of an easy to use six phase model of learning this book Analyzes how the brain reacts to stores and retrieves new information Helps you zoom out to understand the process of learning from beginning to end Helps you zoom in to see what's going on in students minds during each phase Learning may be complicated but learning about learning doesn't have to be And to that end Learning That Sticks helps shine a light into all the black boxes in your classroom and make your practice the most powerful it can be This product is a copublication of ASCD and McREL

**Giving Space to African Voices** Zehlia Babaci-Wilhite, 2014-08-07 This book sets out to bring voices of the South to the debate on localization of education and makes the case that it should be considered a right in education Despite all the scientifically based evidence on the improved quality of education through the use of a local language and local knowledge English as a language of instruction and Western knowledge based curriculum continue to be used at all educational levels in many developing nations This means that in many African countries the goal of rights to education is becoming increasingly remote let alone that of rights in education With this understanding and with the awareness of the education challenges of millions of children throughout Africa the authors argue that local curriculum through local languages needs to be valued and to be preserved and that children need to be prepared for the world in a language that promotes understanding The authors make a clear case that policy makers are in a position to work towards a quality education for all as part of a more comprehensive right based approach We owe it to the children of the South to offer the best quality education possible in order to achieve social justice

### **Dual Role of Microglia in Health and Disease:**

**Pushing the Balance Towards Repair** Raquel Ferreira,Liliana Bernardino,2015-07-23 Microglial cells play a vital role in the innate immune response occurring in the Central Nervous System CNS Under physiologic conditions microglia dynamically patrol the brain parenchyma and participate in the remodeling of active neuronal circuits Accordingly microglia can boost synaptic plasticity by removing apoptotic cells and by phagocytizing axon terminals and dendritic spines that form inappropriate neural connections Upon brain and spinal cord injury or infection microglia act as the first line of immune defense by promoting the clearance of damaged cells or infectious agents and by releasing neurotrophins and or proneurogenic factors that support neuronal survival and regeneration Recently two main pathways were suggested for microglia activation upon stimuli Classical activation is induced by Toll like receptor agonists and Th1 cytokines and polarizes cells to an M1 state mainly leading to the release of TNF alpha IL 6 and nitric oxide and to grave neural damage Alternative activation is mediated by Th2 cytokines and polarizes cells to an M2a state inducing the release of antiinflammatory factors These findings have further fueled the discussion on whether microglia has a detrimental or beneficial action M1 or M2 associated phenotypes respectively in the diseased or injured CNS and more importantly on whether we can shift the balance to a positive outcome Although microglia and macrophages share several common features upon M1 and M2 polarizing conditions they are believed to develop distinct phenotypic and functional properties which translate into different patterns of activity Moreover microglia macrophages seem to have developed a tightly organized system of maintenance of CNS homeostasis since cells found in different structures have different morphology and specific function e g meningeal macrophages perivascular macrophages choroid plexus macrophages Nevertheless though substantial work has been devoted to microglia function consensus around their exact origin their role during development as well as the exact nature of their interaction with other cells of the CNS has not been met This issue discusses how microglial cells sustain neuronal activity and plasticity in the healthy CNS as well as the cellular and molecular mechanisms developed by microglia in response to injury and disease Understanding the mechanisms involved in microglia actions will enforce the development of new strategies to promote an efficient CNS repair by committing microglia towards neuronal survival and regeneration
