2. a. Explain the following theories of failure:
 (i) Maximum shear stress theory (ii) Distortion energy theory. (05 Marks)
 b. A flat plate subjected to a tensile force of 5 kN is shown in Fig.Q2(b). The plate material is grey cast iron having $\sigma_{ultimate} = 200$ MPa. Determine the thickness of the plate. Factor of safety is 2.5. (08 Marks)
 c. A weight 600 N drops through a height of 20 mm and impacts the center of 300 mm-long simply supported circular cross section beam. economies of scale necessitated by the automotive industry will help contain costs in the aviation sector as well. The use of electric propulsion in airplanes is not a new phenomenon. However, it is only recently that it has taken off in a concrete manner with a viable commercial future. *The Electric Flight Technology: Unfolding of a New Future* reviews the history of this field, discusses the key underlying technologies, and describes how the future for these technologies will likely unfold, distinguishing between all electric AE and hybrid electric HE architectures. Written by Dr. Ravi Rajamani, it covers the essential information needed to understand this new technology wave taking hold in the aerospace industry. *The Electric Flight Technology: Unfolding of a New Future* covers fundamental topics such as the history of electric propulsion, including its evolution from using traditional electricity to solar power to batteries as sources to sustain propulsion and flight. The various architectures being considered for electric aircraft, specifically small general aviation GA aircraft and larger business jets, single aisle commercial aircraft, and larger twin aisle commercial aircraft. The various systems and subsystems of an electric aircraft, along with how various subsystems in the vehicle can be integrated in a more optimal manner. In the future, the existing tube and wing configuration will not be the only available architecture; instead, we will be more likely to find an architecture where the propulsion system is embedded within the airframe. The future trends in this arena and what we can expect to see in the next decade or so. *Ships and Offshore Structures XIX*, Carlos Guedes Soares, Y. Garbatov, 2015-09-03.

This three-volume work presents the proceedings from the 19th International Ship and Offshore Structures Congress held in Cascais, Portugal, on 7th to 10th September 2015. The International Ship and Offshore Structures Congress (ISSC) is a forum for the exchange of information by experts undertaking and applying marine structural research. Marx and Engels writings on crisis reveal them They show how its endless imposition of exploitative and alienating work creates such antagonistic conflicts everywhere as to make it ultimately a far more fragile monster than it first appears Each of its efforts to shape social relationships subordinating them to the work of commodity production and its control over society has been and can be thrown into crisis by those of us resisting its way of life and seeking to create more appealing alternatives
