Hale and Kipp

On the night of July 23, 1848, a man named Thomas Kipp was observing the night sky in Arizona through a telescope. He had already watched the sky with the telescope. Kipp noticed a faint glow that he had never seen before. He asked a friend who was with him to look at the new star. They found the new star was about to appear. But the glow was not on the star!

The day was night in New Mexico. How did Kipp manage to look at the night sky through his telescope at the other end?

It was a very clear night. Kipp looked up with his telescope at a part of the sky he had been studying a few weeks earlier. Suddenly, he noticed a bright glow. He had noticed something new! It was a faint, blue glow. Kipp had made a great discovery of what he saw. He believed he had just found a comet.

Kipp was shocked to see stars. Like Kipp, he did not find the object in the sky. Kipp was a manager in a place in Massachusetts that made all comets. He told the people of the comet what he had seen.

Thomas Kipp also sent a message to the center in Massachusetts. The next morning, he heard back from the center. Kipp, like Kipp, had discovered a new comet.

Twelve hours after Kipp and Kipp had first seen the comet, it had a name of Kipp and Kipp.
