It covers the theoretical foundations of the topic and its use for scientists as well as professionals in the field. Further, it addresses all aspects of reservoir sedimentology: clastic sequence stratigraphy, sedimentation, reservoir diagenesis, and heterogeneity, as well as depositional systems: alluvial, fluvial, lacustrine, delta, sandy coast, neritic, deep water, in detail. The research team responsible for this book has been investigating clastic sedimentology for more than three decades and consists of highly published and cited authors. The Chinese edition of this book has been a great success and is popular among sedimentologists and petroleum geologists alike. **Collected Reprints - Atmospheric Physics and Chemistry Laboratory** Atmospheric Physics and Chemistry Laboratory, 1977

As calculated by the author on the basis of geological research, the climatic cycle of the Earth allows a better understanding of climate changes and associated geological processes in the last 20 000 years. In addition, the author discusses the structure of the sub-Quaternary bedrock and analyses complex geological structures of the Baltic Sea Quaternary deposits. Individual chapters address key aspects of tectonic and geological analysis of the Baltic Sea basin: detailed tectonic and geological analysis of the Polish Baltic Sea and Polish coastal zone, global geotectonic cycles of the supercontinents, cyclicity and micro cyclicity arising in the atmosphere and hydrosphere of the Earth, the climatic cycle of the Earth presented for a better understanding of climate changes and associated geological processes in the last 20 000 years, calculating the extent of the influence of climate change and tectonic movements on marine transgressions and regressions.
