THE LUNGS
The lungs are the two large, spongy organs in the chest cavity. They are responsible for taking in oxygen from the air and expelling carbon dioxide. The right lung is slightly larger than the left lung. The lungs are divided into lobes. The right lung has three lobes, and the left lung has two lobes. The lungs are connected to the trachea (windpipe) by bronchi. The bronchi branch out into smaller bronchioles, which lead to the alveoli (tiny air sacs) where gas exchange occurs.

THE HEART
The heart is a muscular organ that pumps blood throughout the body. It is located in the center of the chest cavity, slightly to the left. The heart is divided into four chambers: the right atrium, right ventricle, left atrium, and left ventricle. The right side of the heart pumps deoxygenated blood to the lungs, and the left side pumps oxygenated blood to the rest of the body. The heart is connected to the lungs by pulmonary arteries and veins, and to the rest of the body by the aorta and vena cava.

THE LIVER
The liver is a large, reddish-brown organ located in the upper right quadrant of the abdomen. It is responsible for filtering toxins from the blood, producing bile, and storing energy. THE STOMACH
The stomach is a J-shaped organ located in the upper left quadrant of the abdomen. It is responsible for breaking down food into smaller pieces and mixing it with gastric juices. The stomach is divided into two main parts: the fundus (upper part) and the pylorus (lower part). The stomach is connected to the esophagus by the gastroesophageal junction and to the small intestine by the pyloric sphincter.

THE SMALL INTESTINE
The small intestine is a long, coiled organ located in the central and lower abdomen. It is responsible for absorbing nutrients from the food and breaking it down into even smaller pieces. The small intestine is divided into three parts: the duodenum (first part), jejunum (middle part), and ileum (last part). The small intestine is connected to the stomach by the duodenum and to the large intestine by the ileum.

THE LARGE INTESTINE
The large intestine is a thick, sac-like organ located in the lower abdomen. It is responsible for absorbing water and electrolytes from the food and forming stool. The large intestine is divided into four parts: the cecum (first part), ascending colon, transverse colon, and sigmoid colon. The large intestine is connected to the small intestine by the ileocecal junction and to the rectum by the sigmoid colon.

THE RECTUM
The rectum is the final part of the large intestine, located in the lower abdomen. It is responsible for storing stool until it is ready to be expelled from the body. The rectum is connected to the sigmoid colon and the anal canal.

THE ANAL CANAL
The anal canal is the opening at the bottom of the rectum, through which stool is expelled from the body. It is located at the bottom of the large intestine.
