Approximation Theory and Approximation Practice, Extended Edition Lloyd N. Trefethen,2019-01-01 This is a textbook on classical polynomial and rational approximation theory for the twenty first century Aimed at advanced undergraduates and graduate students across all of applied mathematics it uses MATLAB to teach the field s most important ideas and results Approximation Theory and Approximation Practice Extended Edition differs fundamentally from other works on approximation theory in a number of ways its emphasis is on topics close to numerical algorithms concepts are illustrated with Chebfun and each chapter is a PUBLISHable MATLAB M file available online The book centers on theorems and methods for analytic functions which appear so often in applications rather than on functions at the edge of discontinuity with their seductive theoretical challenges Original sources are cited rather than textbooks and each item in the bibliography is accompanied by an editorial comment In addition each chapter has a collection of exercises which span a wide range from mathematical theory to Chebfun based numerical experimentation This textbook is appropriate for advanced undergraduate or graduate students who have an understanding of numerical analysis and complex analysis It is also appropriate for seasoned mathematicians who use MATLAB **Multisensor Attitude Estimation** Hassen Fourati,Djamel Eddine Chouaib

Belkhiat,2016-11-03 There has been an increasing interest in multi disciplinary research on multisensor attitude estimation technology driven by its versatility and diverse areas of application such as sensor networks robotics navigation video biomedicine etc Attitude estimation consists of the determination of rigid bodies orientation in 3D space This research area is a multilevel multifaceted process handling the automatic association correlation estimation and combination of data and information from several sources Data fusion for attitude estimation is motivated by several issues and problems such as data imperfection data multi modality data dimensionality processing framework etc While many of these problems have been identified and heavily investigated no single data fusion algorithm is capable of addressing all the aforementioned challenges The variety of methods in the literature focus on a subset of these issues to solve which would be determined based on the application in hand Historically the problem of attitude estimation has been introduced by Grace Wahba in 1965 within the estimate of satellite attitude and aerospace applications This book intends to provide the reader with both a generic and comprehensive view of contemporary data fusion methodologies for attitude estimation as well as the most recent researches and novel advances on multisensor attitude estimation task It explores the design of algorithms and architectures benefits and challenging aspects as well as a broad array of disciplines including navigation robotics biomedicine motion analysis etc A number of issues that make data fusion for attitude estimation a challenging task and which will be discussed through the different chapters of the book are related to 1 The nature of sensors and information sources accelerometer gyroscope magnetometer GPS inclinometer etc 2 The computational ability at the sensors 3 The theoretical developments and convergence proofs 4 The system architecture computational resources fusion level **Policy-Making in the GCC** Neil

Quilliam,Mark C. Thompson,2017-09-11 The GCC is a major player in the post 2011 reordering of the Middle East Despite the rise in prominence of individual Gulf states especially Kuwait Qatar Saudi Arabia and the United Arab Emirates and the growth of the GCC as a collective entity surprisingly little attention has been paid to the actual mechanics of policy making in the region This book analyses the vital role that institutions are coming to play in shaping policy in the Gulf Arab states The research coincides with two key developments that have given institutions new importance in the policy process the emergence of a new generation of leaders in the Gulf and the era of low oil prices Both developments along with dramatic demographic change have compelled state and citizens to re evaluate the nature of the social contract that binds them together Contributors assess the changing relationship between state and citizen and evaluate the role that formal and informal institutions play in mediating such change and informing policy The book shows how academic social and economic institutions are responding to the increasingly complex process of decision making where citizens demand better services and further empowerment and states are obliged to seek wider counsel although wanting to retain ultimate authority With contributions from both academics and practitioners this book will be highly relevant for researchers and policymakers alike
