Mathematical Problems in Quantum Physics Federico Bonetto, David Borthwick, Evans Harrell, Michael Loss, 2018-10-24

This volume contains the proceedings of the QMATH13 Mathematical Results in Quantum Physics conference held from October 8-11 2016 at the Georgia Institute of Technology Atlanta Georgia. In recent years a number of new frontiers have opened in mathematical physics such as many body localization and Schrödinger operators on graphs. There has been progress in developing mathematical techniques as well notably in renormalization group methods and the use of Lieb-Robinson bounds in various quantum models. The aim of this volume is to provide an overview of some of these developments. Topics include random Schrödinger operators, many body fermionic systems, atomic systems, effective equations and applications to quantum field theory. A number of articles are devoted to the very active area of Schrödinger operators on graphs and general spectral theory of Schrödinger operators. Some of the articles are expository and can be read by an advanced graduate student.

Coders Clive Thompson, 2020-03-24

Facebook's algorithms shaping the news. Self-driving cars roaming the streets. Revolution on Twitter and romance on Tinder. We live in a world constructed of code and coders are the ones who built it for us. Programmers shape our everyday behavior. When they make something easy to do, we do more of it. When they make it hard or impossible, we do less of it. From acclaimed tech writer Clive Thompson comes a brilliant anthropological reckoning with the most powerful tribe in the world today: computer programmers. In a book that interrogates who they are, how they think, what qualifies as greatness in their world, and what should give us pause, Thompson goes far deeper, taking us close to some of the great programmers of our time, including the creators of Facebook's News Feed, Instagram, Google's cutting edge AI, and more. Speaking to everyone from revered 10X elites to neophytes, back-end engineers and front-end designers, Thompson explores the distinctive psychology of this vocation, which combines a love of logic, an obsession with efficiency, the joy of puzzle solving, and a superhuman tolerance for mind-bending frustration. Along the way, *Coders* ponders the morality and politics of code, including its implications for civic life and the economy and the major controversies of our era. In accessible, erudite prose, Thompson unpacks the surprising history of the field, beginning with the first coders: brilliant and pioneering women who, despite crafting some of the earliest personal computers and programming languages, were later written out of history. At the same time, the book deftly illustrates how programming has become a marvelous new art form, a source of delight and creativity, not merely danger. To get as close to his subject as possible, Thompson picks up the thread of his own long-abandoned coding skills as he reckons in his signature, highly personal style, with what superb programming looks like. To understand the world today, we need to understand code and its consequences. With *Coders*, Thompson gives a definitive

Time Changes of the Brownian Motion: Poincaré Inequality, Heat Kernel Estimate and Protodistance Jun Kigami, 2019-06-10 In this paper time changes of the Brownian motions on generalized Sierpinski carpets including n dimensional cube $[0, 1]^n$ are studied Intuitively time change corresponds to alteration to density of the medium where the heat flows In case of the Brownian motion on $[0, 1]^n$ density of the medium is homogeneous and represented by the Lebesgue measure The author's study includes densities which are singular to the homogeneous one He establishes a rich class of measures called measures having weak exponential decay This class contains measures which are singular to the homogeneous one such as Liouville measures on $[0, 1]^2$ and self similar measures The author shows the existence of time changed process and associated jointly continuous heat kernel for this class of measures Furthermore he obtains diagonal lower and upper estimates of the heat kernel as time tends to 0 In particular to express the principal part of the lower diagonal heat kernel estimate he introduces protodistance associated with the density as a substitute of ordinary metric If the density has the volume doubling property with respect to the Euclidean metric the protodistance is shown to produce metrics under which upper off diagonal sub Gaussian heat kernel estimate and lower near diagonal heat kernel estimate will be shown

Domestication Gone Wild Heather Anne Swanson,Marianne Elisabeth Lien,Gro B. Ween,2018-09-27 The domestication of plants and animals is central to the familiar and now outdated story of civilization s emergence Intertwined with colonialism and imperial expansion the domestication narrative has informed and justified dominant and often destructive practices Contending that

domestication retains considerable value as an analytical tool the contributors to *Domestication Gone Wild* reengage the concept by highlighting sites and forms of domestication occurring in unexpected and marginal sites from Norwegian fjords and Philippine villages to British falconry cages and South African colonial townships Challenging idioms of animal husbandry as human mastery and progress the contributors push beyond the boundaries of farms fences and cages to explore how situated relations with animals and plants are linked to the politics of human difference and conversely how politics are intertwined with plant and animal life Ultimately this volume promotes a novel decolonizing concept of domestication that radically revises its Euro and anthropocentric narrative Contributors Inger Anneberg Natasha Fijn Rune Flikke Frida Hastrup Marianne Elisabeth Lien Knut G Nustad Sara Asu Schroer Heather Anne Swanson Anna Lowenhaupt Tsing Mette Vaarst Gro B Ween Jon Henrik Ziegler Remme
