Geostatistics Oslo 2012 Petter Abrahamsen, Ragnar Hauge, Odd Kolbjørnsen, 2012-05-08 This book consists of 44 technical papers presented at the Ninth International Geostatistics Congress held in Oslo Norway in June 2012 The papers have been reviewed by a panel of specialists in Geostatistics The book is divided into four main sections Theory Petroleum Mining and Environment Climate and Hydrology The first section focuses on new ideas of general interest to many fields of applications The next sections are more focused on the particular needs of the particular industry or activity Geostatistics is vital to any industry dependent on natural resources Methods from geostatistics are used for estimating reserves quantifying economical risk and planning of future industrial operations Geostatistics is also an important tool for mapping environmental hazard and integrating climate data

Advances in Hydrology and Climate Change Surendra Kumar Chandniha, Anil Kumar Lohani, Gopal Krishan, Ajay Krishna Prabhakar, 2022-11-24 Highlighting recent trends that employ innovative management and conservation approaches this volume provides an informative overview of the issues and challenges in water resources affected by climate change such as drought flooding glacier changes and overbuilt up urban areas Focusing on surface and groundwater related issues the book presents solutions that include such methods as morphometric assessment parameter estimation long term trend analysis sustainability indexes storm water management models entropy based measurement of long term precipitation and more The volume focuses on providing a better understanding of climatic uncertainty through hydrometeorological data sets and their application in hydrological modeling These analyses help to serve as the basis for the design of flood control and water usage management policies

Data Assimilation Kody Law, Andrew Stuart, Konstantinos Zygalakis, 2015-09-05 This book provides a systematic treatment of the mathematical underpinnings of work in data assimilation covering both theoretical and computational approaches Specifically the authors develop a unified mathematical framework in which a Bayesian formulation of the problem provides the bedrock for the derivation development and analysis of algorithms the many examples used in the text together with the algorithms which are introduced and discussed are all illustrated by the MATLAB software detailed in the book and made freely available online The book is organized into nine chapters the first contains a brief introduction to the mathematical tools around which the material is organized the next four are concerned with discrete time dynamical systems and discrete time data the last four are concerned with continuous time dynamical systems and continuous time data and are organized analogously to the corresponding discrete time chapters This book is aimed at mathematical researchers interested in a systematic development of this interdisciplinary field and at researchers from the geosciences and a variety of other scientific fields who use tools from data assimilation to combine data with time dependent models The numerous examples and illustrations make understanding of the theoretical underpinnings of data assimilation accessible Furthermore the examples exercises and MATLAB software make the book suitable for students in applied mathematics either through a lecture course
