
HL Paper 1

A biologist exploring an uninhabited island came across an unknown plant. She made the following notes:

- grows in a damp and shady corner of the island
- has large feathery leaves with spore cases (sporangia) arranged on the underside
- young leaves are tightly rolled up
- has roots.

In what phylum should she classify this plant?

- A. Angiospermophyta
- B. Bryophyta
- C. Coniferophyta
- D. Filicinophyta

What promotes natural selection?

- I. Overpopulation
- II. Competition
- III. Variation

- A. I and II only
- B. I and III only
- C. II and III only
- D. I, II and III

Which example provides evidence of evolution?

- A. White wings of a peppered moth turn black in industrial areas.
- B. Antibiotic resistant bacteria replace non-resistant bacteria over time.
- C. Some Galapagos finches' beaks become smaller during dry years.
- D. Polar bears are found in warmer latitudes following global warming.

What type of process causes antibiotic resistance to develop in bacteria?

- A. Competition with viruses
 - B. Overproduction of offspring
 - C. Evolution due to environmental change
 - D. Response by bacteria to an epidemic

innovations and clusters has increasingly dominated local and regional development policies in recent decades This authoritative and accessible Handbook considers important aspects of high tech clusters analyses insightful cluster case studies and provides a number of recommendations for cluster policies The chapters in this Handbook are written by international experts in the field and present evidence of the scope effects and potential of clusters as concentrations of innovative activities The authors emphasize that cluster development is not the only option for local and regional development and argue that for cluster policies to be worthwhile supporting policies in fields such as education R D transportation and communication infrastructure must accompany most cluster policies Furthermore several contributions stress that clusters often develop along a life cycle that may end with decline and even the disappearance of clusters Consequently this Handbook provides the basis for improving both research on innovation and clusters and the formulation and implementation of cluster policies Furnishing the reader with rich comprehensive discussion of innovations and clusters this Handbook will be an essential source for researchers and academics in the field as well as policymakers planners and specialists development experts and agencies and consultants

Pseudomonas Aeruginosa, Biology, Genetics, and Host-pathogen Interactions Dara W. Frank, 2012-02-02 The opportunistic pathogen *Pseudomonas aeruginosa* offers a rich variety of biologically relevant topics to explore and serves as a model system to understand the interactions of Gram negative bacteria with human hosts The organism adapts readily to most environments It has a large and variable genome with a great deal of metabolic potential *P. aeruginosa* encodes a variety of regulatory systems to fine tune gene expression and integrate environmental signals This organism can infect both plants and animals and produces a plethora of enzymes and factors that can overcome host defenses Moreover it has the ability to change between the states of a sedentary colonizer to an invasive and highly motile organism Clinically the bacterium is resistant to many antibiotics making it difficult to treat and impossible to eradicate from the lungs of patients with cystic fibrosis Intrinsic antibiotic resistance combined with an armamentarium of tissue degradative enzymes makes it imperative to possess a comprehensive understanding of the biology genetics and pathogenesis of this organism so that novel therapeutics based on virulence product neutralization can be designed and implemented This Research Topics issue will be devoted to updating the current understanding of *P. aeruginosa* systems as they relate to its different lifestyles in different environments The underlying theme is to provide broad overviews and to integrate protein structure function and gene regulation as it relates to the biology of this bacterium

Neoplastic Hematopathology Dan Jones, 2010-01-24 Fulfilling the void with a Hematopathology book that integrates clinical and experimental studies with diagnostic criteria *Neoplastic Hematopathology: Experimental and Clinical Approaches* provides an overview of the discipline of hematopathology that connects the field with recent advances in immunology research and current clinical practice in the treatment of lymphomas and leukemias Designed for both trainees and specialists in pathology and hematology oncology *Neoplastic Hematopathology: Experimental and Clinical Approaches* has

separate sections on laboratory techniques diagnostic hematopathology treatment and stem cell transplantation Expert chapter authors address both myeloid and lymphoid tumors and provide much needed coverage in transplant biology A study guide highlights key chapter points making the text suitable for boards review in hematopathology and hematology oncology

Microbiological Corrosion of Buildings Rafal L. Górny, 2020-08-10 Environmental stress caused by water continuously exposes buildings to microbial colonization This is highly evident when both minor dampness and mass flooding occur The text describes how microbiological corrosion of buildings and the structures and substances derived from these hazards are responsible for adverse health effects on people exposed to these contaminated environments Microbiological Corrosion of Buildings A Guide to Detection Health Hazards and Mitigation describes the key elements and methods for neutralising and removing microbiological contamination and the operating algorithm for checking the effectiveness of preventative solutions Ideal for construction engineers microbiologists and professionals in the field Features Latest methods for detection of indoor microbial hazards Identifies the tools needed for natural non destructive and non invasive methods of bio corrosion removal Describes the social and health problems associated with exposure to microbiological hazards Provides case studies and examples of microorganisms responsible for microbial corrosion Climate change and the associated adverse effects such as floods and whirlwinds make the problem of microbiological corrosion of buildings that generates health risks and economic losses on a global scale the focus of science and technology The monograph presents a complex problem of building bio corrosion that requires knowledge of the distant fields of microbiology and building technology for the use of both scientists and practitioners This pioneering work of an interdisciplinary nature harmoniously combines knowledge on specific microbiological issues relating to the process of bio corrosion and the associated health risks with detailed issues of construction technology concerning the prevention of bio corrosion and its removal The authors succeeded in combining a very high scientific level in the monograph with an accessible and understandable presentation of complex problems The extensive references ranging from classical items from many years ago to the most recent articles presenting the state of the art in this field are worth emphasising Prof Jacek Dutkiewicz Ph D D Sc Institute of Rural Health in Lublin **Statutes and Ordinances of the University of Cambridge 2007** University of Cambridge, 2007-10-04 This is the latest updated edition of the University of Cambridge s official statutes and Ordinances *The Runes of Evolution* Simon Conway Morris, 2015-06-30 How did human beings acquire imaginations that can conjure up untrue possibilities How did the Universe become self aware In *The Runes of Evolution* Simon Conway Morris revitalizes the study of evolution from the perspective of convergence providing us with compelling new evidence to support the mounting scientific view that the history of life is far more predictable than once thought A leading evolutionary biologist at the University of Cambridge Conway Morris came into international prominence for his work on the Cambrian explosion especially fossils of the Burgess Shale and evolutionary convergence which is the process whereby organisms not closely related not monophyletic

independently evolve similar traits as a result of having to adapt to similar environments or ecological niches In *The Runes of Evolution* he illustrates how the ubiquity of convergence hints at an underlying framework whereby many outcomes not least brains and intelligence are virtually guaranteed on any Earth like planet Conway Morris also emphasizes how much of the complexity of advanced biological systems is inherent in microbial forms By casting a wider net *The Runes of Evolution* explores many neglected evolutionary questions Some are remarkably general Why for example are convergences such as parasitism carnivory and nitrogen fixation in plants concentrated in particular taxonomic hot spots Why do certain groups have a particular propensity to evolve toward particular states Some questions lead to unexpected evolutionary insights If bees sleep as they do do they dream Why is that insect copulating with an orchid Why have sponges evolved a system of fiber optics What do mantis shrimps and submarines have in common If dinosaurs had not gone extinct what would have happened next Will a saber toothed cat ever re evolve Cona Morris observes Even amongst the mammals let alone the entire tree of life humans represent one minute twig of a vast and largely fossilized arborescence Every living species is a linear descendant of an immense string of now vanished ancestors but evolution itself is the very reverse of linear Rather it is endlessly exploratory probing the vast spaces of biological hyperspace Indeed this book is a celebration of how our world is and was populated by a riot of forms a coruscating tapestry of life *The Runes of Evolution* is the most definitive synthesis of evolutionary convergence to be published to date

Mind as Machine Margaret A. Boden, 2006 Cognitive science is among the most fascinating intellectual achievements of the modern era The quest to understand the mind is an ancient one But modern science has offered new insights and techniques that have revolutionized this enquiry Oxford University Press now presents a masterly history of the field told by one of its most eminent practitioners Psychology is the thematic heart of cognitive science which aims to understand human and animal minds But its core theoretical ideas are drawn from cybernetics and artificial intelligence and many cognitive scientists try to build functioning models of how the mind works In that sense Margaret Boden suggests its key insight is that mind is a very special machine Because the mind has many different aspects the field is highly interdisciplinary It integrates psychology not only with cybernetics AI but also with neuroscience and clinical neurology with the philosophy of mind language and logic with linguistic work on grammar semantics and communication with anthropological studies of cultures and with biological and A Life research on animal behaviour evolution and life itself Each of these disciplines in its own way asks what the mind is what it does how it works how it develops and how it is even possible Boden traces the key questions back to Descartes s revolutionary writings and to the ideas of his followers and his radical critics through the eighteenth and nineteenth centuries Her story shows how controversies in the development of experimental physiology neurophysiology psychology evolutionary biology embryology and logic are still relevant today Then she guides the reader through the complex interlinked paths along which the study of mind developed in the twentieth century Cognitive science covers all mental phenomena not just cognition knowledge but

also emotion personality psychopathology social communication religion motor action and consciousness In each area Boden introduces the key ideas and researchers and discusses those philosophical critics who see cognitive science as fundamentally misguided And she sketches the waves of resistance and acceptance on the part of the media and general public showing how these have affected the development of the field No one else could tell this story as Boden can she has been a member of the cognitive science community since the late 1950s and has known many of its key figures personally Her narrative is written in a lively swift moving style enriched by the personal touch of someone who knows the story at first hand Her history looks forward as well as back besides asking how state of the art research compares with the hopes of the early pioneers she identifies the most promising current work Mind as Machine will be a rich resource for anyone working on the mind in any academic discipline who wants to know how our understanding of mental capacities has advanced over the years
