Measuring Up Arie L. Nettles, Michael T. Nettles, 2012-12-06 *Measuring Up* revisits vital issues of equity and assessment through the research efforts and insights of many of the nation's most prominent educators and assessment experts As its most urgent purpose the publication aims to sensitize readers to the unfairness and inappropriate uses of testing instruments which under optimal circumstances have the potential to benefit all students With America fervently espousing both national and state testing the differential performance by race and social class raises the specter of tests as barriers to life milestones such as promotion graduation and college admissions In response to such punitive testing the papers included here explore a host of models and practices that are currently being piloted both in America and abroad as educators grapple with the effects the assessment is having on minority and disadvantaged students and school systems In the process outcomes of innovative portfolio and authentic assessments are weighed against important standards and principles of validity and consequences As the various authors probe the gap between African American and White test scores they raise important questions of resources family background and educational opportunity Beyond their value of their recommendations to educators their papers help to identify causes of pupil deficiencies in ways that can be addressed by policymakers To reinforce the emphasis on equity several authors present a definitive defense of affirmative action as a critical counter measure to the lack of fairness in school quality family and social supports and educational resources

Measuring Up in Education Steven Stolz, R. Scott Webster, 2020-05-21 Cultures of measurement are often considered to dominate educational practices to the degree that as Biesta 2010 has identified in *Good Education in an Age of Measurement* we no longer measure what we value but rather we have become conditioned to value what is measured A clear example of this occurs when institutions and staff teach to the test by emphasising narrow conceptions of learning and of knowledge simply because the consequences of high stakes assessments have important implications regarding funding resources and even tenure This collection explores via various philosophical means how valuable educational practices can occur within and beyond cultures of measurement What seems to be required is for practitioners in education to regain their relationship to the overall

purposes of education such as the furthering of justice and democracy for both individual students and societies as a whole. Such a reconnection has the potential to re-humanise curricular experiences for students which may have become dehumanised through particular cultures of measurement. It is argued that certain legitimate measures can advance justice and democracy and so careful attention must be assigned to their validity and value. This book was originally published as a special issue of *Educational Philosophy and Theory*. **Measuring Up** Janet E. Wall, Garry Richard Walz, 2004. This intense handbook covers a variety of issues from best standardized testing procedures to evaluating student achievement through performance standards. Included are special topics like the assessment of students with mental or behavioral problems, helping students with limited English proficiency and ethnic differences incorporated into testing. The role of the educator or counselor is studied while reporting test results to parents or social service agencies, facilitating career development and designing needs assessment for individuals or programs. Measuring Up Robert Rothman, 1995-03-29. Rothman offers a highly accessible examination of the shift in thinking about testing. Illustrative case studies of assessment programs provide a window into the classrooms showing how change has come about and what the new methods actually look like in practice.

Sacred Ecology Fikret Berkes, 2017-09-01. Sacred Ecology examines bodies of knowledge held by indigenous and other rural peoples around the world and asks how we can learn from this knowledge and ways of knowing. Berkes explores the importance of local and indigenous knowledge as a complement to scientific ecology and its cultural and political significance for indigenous groups themselves. With updates of relevant links for further learning and over 180 new references, the fourth edition gives increased voice to indigenous authors and reflects the remarkable increase in published local observations of climate change. Your Body Matthew MacDonald, 2009-07-21. What exactly do you know about your body? Do you know how your immune system works? Or what your pancreas does? Or the myriad and often simple ways you can improve the way your body functions? This full color, visually rich guide answers these questions and more. Matthew MacDonald, noted author of *Your Brain: The Missing Manual*, takes you on a fascinating tour of your body from the outside in, beginning with your skin and progressing to your vital organs. You'll look at the quirks, curiosities and shortcomings we've all learned to live with and pick up just enough biology to understand how your body works. You'll learn that you shed skin more frequently than snakes do. Why the number of fat cells you have rarely changes no matter how much you diet or exercise, they simply get bigger or smaller. How you can measure and control fat. That your hair is made from the same stuff as horses' hooves. That you use only a small amount of the oxygen you inhale. Why blood pressure is a more important health measure than heart rate with four ways to lower dangerously high blood pressure. Why our bodies crave foods that make us fat. How to use heart rate to shape an optimal workout session, one that's neither too easy nor too strenuous. Why a tongue with just half a dozen taste buds can identify thousands of flavors. Why bacteria in your gut outnumber cells in your body and what function they serve. Why we age and why we can't turn back the clock. What happens to your body in the minutes after you die. Rather than dumbed down
