accurate exposure assessment are needed The current risk assessment paradigm dealing mostly with one by one chemicals dismisses the potential synergisms or interactions from exposures to mixtures of contaminants particularly at the low exposure range Thus evidence is needed on exposure and health effects of mixtures of contaminants in drinking water Finally water stress and water quality problems are expected to increase in the coming years due to climate change and increasing water demand by population growth and new evidence is needed to design appropriate adaptation policies This Special Issue of International Journal of Environmental Research and Public Health IJERPH focuses on the current state of knowledge on the links between drinking water quality and human health

Histoplasma Pneumocystis Stachybotrys **Ziekteverwekkers in de microbiologie** Andreas Vanilssen, Het is gebruikelijk om te spreken van een hele bacteriesoort als pathogeen wanneer het wordt geïdentificeerd als de oorzaak van een ziekte. Zo kan infectie van mesenteriale lymfeklieren van muizen met Yersinia de weg vrijmaken voor voortdurende infectie van deze plaatsen door Lactobacillus, mogelijk door een mechanisme van immunologische littekens.
