Gabriel Bitton,2014-10-06 Microbiology of Drinking Water Production and Distribution addresses the public health aspects of  
drinking water treatment and distribution It explains the different water treatment processes such as pretreatment  
coagulation flocculation sedimentation filtration disinfection and their impacts on waterborne microbial pathogens and  
parasites Drinking water quality may be degraded in water distribution systems microorganisms form biofilms within  
distribution systems that allow them to flourish Various methodologies have been proposed to assess the bacterial growth  
potential in water distribution systems Microbiology of Drinking Water Production and Distribution also places drinking  
water quality and public health issues in context it addresses the effect of bioterrorism on drinking water safety particularly  
safeguards that are in place to protect consumers against the microbial agents involved In addition the text delves into  
research on drinking water quality in developing countries and the low cost treatment technologies that could save lives The  
text also examines the microbiological water quality of bottled water often misunderstood by the public at large
