

Thermo Scientific Microm STS Section-Transfer-System

Matches up perfectly with all microtomes of the Thermo Scientific Microm rotary microtome series. The STS has an integrated water bath and a disposable blade system – designed to optimize the paraffin ribbon retrieval process. The sections are gently transferred by a permanent laminar water flow into the waterbath providing you with more useable sections from less material.

- Closed circuit
- Seamlessly adjustable water flow rate
- Selectable water temperature from ambient temperature up to +45°C
- Rounded and illuminated water bath (aluminium) with a volume of 500 ml

Simplify the Workflow at your Microtome!

***"The perfect trinity
uniquely from Thermo
Scientific."***

Multiply your benefits by combining a Thermo Scientific rotary microtome, the Section-Transfer-System STS and Cool-Cut.

The Organization of Reduction, Data Flow, and Control Flow Systems Werner Kluge,1992 In light of research over the last decade on new ways of representing and performing computations this book provides a timely reexamination of computer organization and computer architecture It systematically investigates the basic organizational concepts of reduction data flow and control flow or state transition and their relationship to the underlying programming paradigms For each of these concepts Kluge looks at how principles of language organization translate into architectures and how architectural features translate into concrete system implementations comparing them in order to identify their similarities and differences The focus is primarily on a functional programming paradigm based on a full fledged operational calculus and on its realization by various reduction systems Kluge first presents a brief outline of the overall configuration of a computing system and of an operating system kernel introduce elements of the theory of Petrinets as modeling tools for nonsequential systems and processes and use a simple form of higher order Petri nets to identify by means of examples the operational and control disciplines that govern the organization of reduction data flow and control flow computations He then introduces the notions of abstract algorithms and of reductions and includes an overview of the theory of the calculus The next five chapters describe the various computing engines that realize the reduction semantics of a full fledged calculus The remaining chapters provide self contained investigations of the G machine SKI combinator reduction and the data flow approach for implementing the functional programming paradigm This is followed by a detailed description of a typical control flow or von Neumann machine architecture a VAX11 system Properties of these machines are summarized in the concluding chapter which classifies them according to the semantic models they support
