**Cyberlibertarianism** David Golumbia,2024-11-12 An urgent reckoning with digital technology s fundamentally right wing legal and economic underpinnings In a timely challenge to the potent political role of digital technology Cyberlibertarianism argues that right wing ideology was built into both the technical and social construction of the digital world from the start Leveraging more than a decade of research David Golumbia traces how digital evangelism has driven the worldwide shift toward the political right concealing inequality xenophobia dishonesty and massive corporate concentrations of wealth and power beneath the utopian presumption of digital technology as an inherent social good Providing an incisive critique of the push for open access and open source software and the legal battles over online censorship and net neutrality Cyberlibertarianism details how the purportedly democratic internet has been employed as an organizing tool for terror and hate groups and political disinformation campaigns As he unpacks our naively utopian conception of the digital world Golumbia highlights technology s role in the advancement of hyperindividualist and antigovernment agendas demonstrating how Silicon Valley corporations and right wing economists antiestablishment figures such as Julian Assange Elon Musk Peter Thiel Edward Snowden and Mark Zuckerberg and seemingly positive voices such as John Perry Barlow Cory Doctorow the Electronic Freedom Foundation and Wikipedia all have worked to hamper regulation and weaken legal safeguards against exploitation Drawing from a wide range of thought in digital theory economics law and political philosophy as well as detailed research and Golumbia s own experience as a software developer Cyberlibertarianism serves as a clarion call to reevaluate the fraught politics of the internet In the hope of providing a way of working toward a more genuinely democratic and egalitarian future for digital technology this magisterial work insists that we must first understand the veiled dogmas from which it has been constructed Retail e book files for this title are screen reader friendly

economy contributes to a dynamic evolution of markets and competition. Nonetheless, concerns are increasingly raised about the market dominance of a few key players. Because these companies hold the power to drive rivals out of business, regulators have begun to seek scope for competition enforcement in cases where companies claim that withholding data is needed to satisfy customers and cut costs. This book is the first focus on how competition law enforcement tools can be applied to refusals of dominant firms to give access to data on online platforms such as search engines, social networks, and e-commerce platforms, commonly referred to as the gatekeepers of the Internet. The question arises whether the denial of a dominant firm to grant competitors access to its data could constitute a refusal to deal and lead to competition law liability under the so-called essential facilities doctrine, according to which firms need access to shared knowledge in order to be able to compete. A possible duty to share data with rivals also brings to the forefront the interaction of competition law with data protection legislation, considering that the required information may include personal data of individuals. Building on the refusal to deal concept and using a multidisciplinary approach, the analysis covers such issues and topics as the following: data portability; interoperability; data as a competitive advantage or entry barrier in digital markets; market definition and dominance with respect to data; disruptive versus sustaining innovation; role of intellectual property regimes; economic trade-off in essential facilities cases; relationship of competition enforcement with data protection law and data-related competition concerns in merger cases. The author draws on a wealth of relevant material, including EU and US decision-making, practice, case law, and policy documents, as well as economic and empirical literature on the link between competition and innovation. The book concludes with a proposed framework for the application of the essential facilities doctrine to potential forms of abuse of dominance relating to data. In addition, it makes suggestions as to how data protection interests can be integrated into competition policy. An invaluable contribution to ongoing academic and policy discussions about how data-related competition concerns should be addressed under competition law, the analysis clearly demonstrates how existing competition tools for market definition and assessment of dominance can be applied to online platforms. It will be of immeasurable value to the many jurists, business persons, and academics concerned with this very timely subject.
