Federal Register ,2013-04 **Fundamental Issues in Defense Training and Simulation** George Galanis, Robert Sottolare, 2017-05-15 Defense forces have always invested a great deal of their resources in training In recent times changes in the complexity and intensity of operations have reaffirmed the importance of ensuring that warfighters are adequately prepared for the environments in which they are required to work The emergence of new operational drivers such as asymmetric threats urban operations joint and coalition operations and the widespread use of military communications and information technology networks has highlighted the importance of providing warfighters with the competencies required to act in a coordinated adaptable fashion and to make effective decisions in environments characterized by large amounts of sometimes ambiguous information While investment in new technologies can make available new opportunities for action it is only through effective training that personnel can be made ready to apply their tools in the most decisive and discriminating fashion There are many factors which can have an impact

on the efficacy of training and many issues to consider when designing and implementing training strategies These issues are often complex and nuanced and in order to grasp them fully a significant investment of time and energy is required However the requirement to respond quickly to ever changing technology a high operational tempo and minimal staffing may preclude many in today s defense forces from seeking out all such resources on their own This edited collection provides brief easy to understand summaries of the key issues in defense training and simulation as well as guidance for further reading It consists of a collection of short essays each of which addresses a fundamental issue in defense training and simulation and features an up to date reference list to enable the reader to undertake further investigation of the issues addressed In essence this book provides the optimum starting point or first resource for readers to come to terms with the important issues associated with defense training and simulation The contributions are written by leading scholars from military research institutions in the US UK Canada Australia and New Zealand as well as selected researchers from academic and private sector research institutions
