Research Topic we compile a series of articles that discuss different metabolic adaptations that proliferating cells undergo to sustain growth and division as well as the potential therapeutic window to treat certain pathologies with a special focus on cancer

Strategies to Overcome Metabolic Syndrome and Related Diseases Lin Zhu, Curtis C. Hughey, Bakovic Marica, William J. Massey, 2025-01-06 Metabolic syndrome is a cluster of conditions that include increased blood pressure high blood sugar excess body fat around the waist and abnormal cholesterol Any component of metabolic syndrome may increase the risks of type 2 diabetes heart disease stroke and cancer Metabolic syndrome is closely linked to obesity and insulin resistance and insulin resistance may further worsen hyperglycemia and dyslipidemia Chronic inflammation in obesity plays a critical role in atherosclerotic cardiovascular diseases and stroke Pathways that are involved in the regulation of glucose and lipid metabolism in obesity with insulin resistance have been actively studied but not yet completely understood

Iron as Environmental Factor in the Pathogenesis of Crohn's Disease-like Ileitis Tanja Werner, 2011 Inflammatory bowel diseases IBD including ulcerative colitis and Crohn's disease CD are chronic disorders of the gastrointestinal tract Iron replacement therapy is a common treatment in anemic CD patients but oral iron supplements seem to be less tolerated Pathogenesis of CD has been attributed to intestinal bacteria and environmental factors including dietary components like iron that trigger disease in a genetically predisposed host The aim of this study was to characterize the interrelationship between iron the gut microbiota and the development of chronic ileitis in a murine model of CD Experimental results indicate that luminal iron sulfate deprivation in combination with systemic iron repletion inhibits the development of inflammation in TNF Delta ARE WT mice The mechanisms imply changes in the gut microbiota as well as inhibition of endoplasmic reticulum stress and apoptosis in the intestinal epithelium In conclusion luminal iron may directly affect intestinal epithelial function or generate a pathological milieu in the intestine that triggers epithelial cell stress associated apoptosis through changes in the microbial homeostasis These data may offer a new possibility for the treatment of chronic intestinal inflammation and anemia in CD patients through modulation of the patients iron status In addition oral replacement therapy with iron sulfate may trigger inflammatory processes associated with progression of CD like ileitis and intravenous therapy should be preferred

Environmental Health Perspectives, 1993 *Binding, Transport and Storage of Metal Ions in Biological Cells* Wolfgang Maret, Anthony Wedd, 2014-07-09 Metal ions play key roles in biology Many are essential for catalysis for electron transfer and for the fixation sensing and metabolism of gases Others compete with those essential metal ions or have toxic or pharmacological effects This book is structured around the periodic table and focuses on the control of metal ions in cells It addresses the molecular aspects of binding transport and storage that ensure balanced levels of the essential elements Organisms have also developed mechanisms to deal with the non essential metal ions However through new uses and manufacturing processes organisms are increasingly exposed to changing levels of both essential and non essential ions in new chemical forms They may not have developed defenses against some of these forms such as nanoparticles Many diseases such as cancer diabetes and neurodegeneration are associated with metal ion imbalance There may be a deficiency of the essential metals overload of either essential or non essential metals or perturbation of the overall natural balance This book

is the first to comprehensively survey the molecular nature of the overall natural balance of metal ions in nutrition toxicology and pharmacology It is written as an introduction to research for students and researchers in academia and industry and begins with a chapter by Professor R J P Williams FRS *Fetal and Neonatal Physiology* Richard A. Polin, William W. Fox, Steven H.
