Test Bank

MULTIPLE CHOICE

1. The nurse is caring for a client who was medicated for pain 1 hour ago. The client is stating that the medication is not working and she still has pain. What is the first action that the nurse will take?
 - a. Assess the client to determine her pain score.
 - b. Believe the client's report of pain.
 - c. Wait until it is time for the next pain medication dose.
 - d. Teach the client how to use guided imagery.

ANS: B

Health care providers often do not believe the client's report of pain. The nurse's primary role in pain management is to advocate for the client by believing reports of pain. It is important to remember that self-reporting is always the most reliable indication of pain. After believing that the client is in pain, the client can be assessed to determine her pain score and also be taught nonpharmacologic methods to relieve pain. The nurse needs to take action to alleviate the pain and not wait until the next medication dosage is due.

DIF: Cognitive Level: Application

REF: N/A for Application and above

OBJ: Learning Outcome 1

TOP: Client Needs Category: Safe and Effective Care Environment (Management of Care)

MSC: Integrated Process: Nursing Process (Analysis)

2. When is the nurse correct in decreasing the dose of pain medication in a client with end-stage cancer?
 - a. The spouse is worried that the client may become addicted.
 - b. The client wants to remain alert during the visit of a long time friend.
 - c. The client has lost considerable weight and does not want to eat.
 - d. The client is becoming combative at night.
