 nature and evolution which can lead to new treatments for infectious and malignant diseases Goran Indjic a physician and  
 clinical microbiologist shares a detailed analysis of the phenomena of prokaryotic and eukaryotic cells in the book Taking an  
 innovative approach he upends contemporary literature in the field Relying on biology philosophy other scientific disciplines  
 and even art Indjic offers fresh ideas and experiments for investigating the nature of prokaryotic and eukaryotic cells  
 According to this new approach basic structures of prokaryotic and eukaryotic cells consist of polypeptides that build protein  
 and nucleic acid spirals which in turn build strings that generate filaments of prokaryotic cells and complex cylinders of  
 eukaryotic cells The author describes in detail the strings filaments and complex cylinders that are structures of the cells  
 built and unified by metabolism Previously prokaryotic and eukaryotic structures were observed in dead cells without deeper  
 thinking and imagination With deeper analysis imagination and thinking Universal Laws of Nature and Cells offers insights  
 into the cellular phenomena and practical taxonomy of prokaryotic cells     *Your Body Can Talk, Revised 2nd Edition* Susan
