*Impirical Foundations of Information and Software Science* Jagdish C. Agrawal,2012-12-06 The purpose of the Second Symposium on Empirical Foundations of Information and Software Science EFISS was in essence the same as that of the First Symposium in this series i e to explore subjects and methods of scientific inquiry which are of fundamental and common interest to information and software sciences and to map directions of research that will benefit from the mutual interaction of these two fields In fact one of the most important results of the First EFISS Symposium was the conclusion that the commonality of these two sciences is much more than just the commonality of their objects of study namely the study of informative and prescriptive properties of texts in all kinds of sign systems such as natural or artificial languages Rather the most challenging problems appear to be in the areas in which both these sciences overlap such as for instance the problem of trade offs between informative and prescriptive uses of texts This problem can be formulated in generic terms as follows given a certain kind of action or activity which has been prescribed to some agent i e which is required to be implemented or carried out what kind of information should be provided to the agent in what form and how should it be distributed over the contextual structure of the prescriptive text to enable the agent to carry out the action or activity most effectively and efficiently

*Economic Growth and Environmental Sustainability* Paul Ekins,2002-01-04 A key area of public policy in the last twenty years is the question of how and how much to protect the environment At the heart of this has been the heated debate over the nature of the relationship between economic growth and environmental sustainability Is environmental sustainability economic growth or green growth a contradiction in terms Avoiding the confusion that often surrounds these

issues Ekins provides rigorous expositions of the concept of sustainability integrated environmental and economic accounting the Environmental Kuznets Curve the economics of climate change and environmental taxation Individual chapters are organised as self contained state of the art expositions of the core issues of environmental economics with extensive cross referencing from one chapter to another in order to guide the student or policy maker through these complex problems Paul Ekins breaks new ground in defining the conditions of compatibility between economic growth and environmental sustainability and provides measures and criteria by which the environmental sustainability of economic growth as it occurs in the real world may be judged It is argued that green growth is not only theoretically possible but economically achievable and the authors show what environmental and economic policies are required to achieve this Economic Growth and Environmental Sustainability will be welcomed by students of and researchers in environmental economics and environmental studies as well as all interested policy makers      *Trust Companies* ,
