

• OPERATOR'S COMPARTMENT ADJUSTING SEAT

**WARNING**

- Adjust the seat before starting operations or when changing operators at the beginning of a shift. (Always stop the lift truck before adjusting the seat.)
- Adjust the seat to a position where it is possible to depress the brake pedal fully with your back against the backrest of the operator's seat. (Always stop the lift truck before adjusting the seat.)
- Always wear your seat belt properly during operations.

It is possible to slide the seat forward or backward to set it to the optimum position.

Method of adjusting fore-and-aft position

1. Raise the lever. (When the lever is raised, the seat can slide to the front or rear.)
2. Set the seat to a position where operation is easy, then release the lever. (The seat will be locked in position.)

Amount of fore-and-aft adjustment: 140 mm (5.5 in)

Method of adjusting reclining angle (suspension seat only)

1. Pull up the lever. (When the lever is raised, the angle of the seatback can be adjusted.)
2. Adjust the angle of the seat to a position where operation is easy, then release the lever. After adjusting, move the seat lightly to the front and rear to check that it is securely locked in position.

Method of fitting and releasing seat belt

1. Pull the belt out from the holder at the right side of the seat, then insert the tongue into the buckle until a click is heard. (In this condition the seat belt is locked in position.)

The seat belt is designed to give a shock in the holder when the belt locks. The same shock may occasionally be felt if the belt locks when it is pulled out of the holder.

If this happens, grip the tongue end of the belt with both hands, pull up strongly, and when the belt loosens, pull the belt out again slowly.

2. To release the lock, hold the tongue portion of the belt with your right hand, then press the red button in the buckle with your left hand.

3. The belt will automatically be wound into the holder. When this happens, hold the belt and let it wind in slowly.

With the suspension seat, it is also possible to adjust the suspension to match the operator's weight in addition to adjusting the fore-and-aft position and reclining angle.

Method of adjusting suspension (suspension seat only)

Turn the adjustment knob on the right side of the operator's seat to adjust the suspension to match your weight.

Adjust as follows:

- To INCREASE the weight setting, turn to the RIGHT
 - To DECREASE the weight setting, turn to the LEFT
- (Weight adjustment range: 50 - 120 kg (110 - 265 lb))

Komatsu Forklift Fg30 Manual
