Exercise, Sport, and Bioanalytical Chemistry Anthony C. Hackney, 2016-03-14. A new volume in the Emerging Issues in Analytical Chemistry series. *Exercise Sport and Bioanalytical Chemistry Principles and Practice* focuses on the basic and applied aspects of energy metabolism in humans. Concise and scientific yet intelligible to the nonscientist, the book consists of two parts. Part I, *Introduction Basics and Background*, provides the biochemistry necessary to understand the rest of the book and describes analytical processes and results as an aid to grasping the science. Part II, *Applications Knowledge into Practice*, explores measurement techniques for metabolism, energy expenditure of various activities, techniques that enhance expenditure, metabolic adaptation, foods and drugs that enhance expenditure, and the role of bioanalytical chemistry in future research in exercise and sport. Discussion of the benefits of exercise and practices for improving the capacity to perform exercise is illustrated by many useful and entertaining examples. This volume allows readers to come away with a grasp of the scientific concepts, how they are manifested in research techniques, and how the results of research can be applied in the real world of public health and personal development. The Emerging Issues in Analytical Chemistry series is published in partnership with RTI International and edited by Brian F. Thomas. Biothermodynamics Mustafa Ozilgen, Esra Sorguven Oner, 2016-11-18. Over the past several decades, there has been increasing research interest in thermodynamics as applied to biological systems. This concerns topics such as muscle work and internal energy, such as fat and starch. Applications of the first and second laws of thermodynamics to the human body are important to dieticians and health science experts, and applications of these concepts to the animal body are a major concern of animal scientists. This book covers these key topics, which are typically not covered in classic or traditional thermodynamics texts used in mechanical and chemical engineering.
