MorphoEvoDevo: A Multilevel Approach to Elucidate the Evolution of Metazoan Organ Systems ,2023-11-10

Analyzing animal development in a comparative framework provides a unique window into evolutionary history With a long tradition that dates back to iconic 19th century zoologists such as Ernst Haeckel and Charles Darwin Evolutionary Developmental Biology is firmly rooted in morphological research While studies using a classical model system approach have resulted in considerable methodological progress in particular by establishing molecular genetic tools to tackle questions surrounding animal development it quickly became obvious that a broad comparative dataset involving as many taxa as possible is necessary for sound evolutionary inferences Thus today s EvoDevo embraces morphological molecular and experimental procedures interpreted in a phylogenetic framework in order to answer key questions that revolve around the evolution of animal cell types organ systems and ultimately entire species

Fluorescence In Situ Hybridization (FISH) - Application Guide Thomas Liehr,2008-11-26 This book is a unique source of information on the present state of the exciting field of molecular cytogenetics and how it can be applied in research and diagnostics The basic techniques of fluorescence in situ hybridization and primed in situ hybridization PRINS are outlined the multiple approaches and probe sets that are now available for these techniques are described and applications of them are presented in 36 chapters by authors from ten different countries around the world The book not only provides the reader with basic and background knowledge on the topic but also gives detailed protocols that show how molecular cytogenetics is currently performed by specialists in this field The FISH Application Guide initially provides an overview of the historical development of molecular cytogenetics its basic procedures the equipment required and probe generation The book then describes tips and tricks for making different tissues available for molecular cytogenetic studies These are followed by chapters on various multicolor FISH probe sets their availability and their potential for use in combination with other approaches The possible applications that are shown encompass the characterization of marker chromosomes cryptic cytogenetic aberrations and epigenetic changes in humans by interphase and metaphase cytogenetics studies of nuclear architecture as well as the application of molecular cytogenetics to zoology botany and microbiology

Bench to Bedside: Translating Pre-clinical Research Into Clinical Trials for Childhood Brain Tumors ,2023-09-05

umors arising in the brain are the most common solid cancers in children They are the major cause of childhood cancer deaths Indeed more children die from brain tumors than any other disease Despite improvement in cure rates towards the end of the 20th century survival statistics have remained unchanged over the past two decades and remain at a level well below that of other childhood cancers such as

leukemia Also survivors have a high risk of significant permanent adverse side effects that require a lifetime of clinical management significantly impacting health systems and quality of life for patients The lack of advancements in childhood brain tumor treatment was due to deficiencies in knowledge about the underlying biological causes However pediatric neuro oncology has undergone an exciting and dramatic transformation during the past 10 years driven by advances in genomic technology and international collaboration Armed with this new knowledge there is a tremendous opportunity to personalize the treatment by developing novel therapeutic approaches that are tailored to each molecular subtype of these devastating brain cancers to improve the cure rate while minimizing toxicities

Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas M. A. Hayat, 2005-01-31 Immunohistochemistry is the use of specific antibodies to stain particular molecular species in situ This technique has allowed the identification of many more cell types than could be visualized by classical histology particularly in the immune system and among the scattered hormone secreting cells of the endocrine system and has the potential to improve diagnosis prognosis and therapeutic options of cancer *Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas* discusses all aspects of immunohistochemistry and in situ hybridization technologies and the important role they play in reaching a cancer diagnosis It provides step by step instructions on the methods of additional molecular technologies such as DNA microarrays and microdissection along with the benefits and limitations of each method The topics of region specific gene expression its role in cancer development and the techniques that assist in the understanding of the molecular basis of disease are relevant and necessary in science today This book is the second volume of three planned individually sold volumes on this topic Like Volume 1 this book fully explains the principles and applications of modern techniques used in the field of molecular genetics It will be of particular interest to pathologists and molecular pathologists conducting both academic and or clinical research The only book available that translates molecular genetics into cancer diagnosis The results of each Immunohistochemical and in situ hybridization method are presented in the form of color illustrations Methods discussed were either developed or refined by expert contributors in their own laboratories

Biological Contaminants of Concern in Water and Wastewater: An Environmental Health Perspective Visva Bharati Barua, Roshan Prabhakar, Divya Pal, Vivek Pulikkal, Isaac Dennis Amoah, 2025-06-03 Biological contaminants in water and wastewater are one of the chief health hazards linked with global environmental health. A slew of health and environmental hazards associated with these contaminants are chronic recalcitrant and bioaccumulative. Increasing biological contaminants in the water and wastewater calls for a need to assess the risks associated with the contaminants, identify the source, monitor, analyze the toxicity, treat and incorporate safety standards for improved environmental health. Hence, developing robust analytical and effective treatment technologies is vital to managing these contaminants in water and wastewater. This Research Topic covers a broad range of biological contaminants including but not limited to viruses, algae, bacteria, antibiotic resistant genes, parasites, and algal toxins that are known to affect public health and the environment adversely. The focus will be on the source, occurrence, analysis, toxicity, fate, treatment, environmental health impacts, and safety standards of these biological contaminants.

Geotechnical Engineering for the Preservation of Monuments and Historic Sites III Renato Lancellotta, Carlo Viggiani, Alessandro Flora, Filomena de Silva, Lucia Mele, 2022-06-15 The conservation of monuments and historic sites is one of the most challenging problems facing modern civilization. It involves inextricable patterns, factors belonging to different fields: cultural, humanistic, social, technical, economical, administrative, and the requirements of safety and use appear to be or often are in conflict with the respect of the integrity of the monuments. The complexity of the topic is such that a shared framework of reference is still lacking among art historians, architects, structural and geotechnical engineers. The complexity of the subject is such that a shared frame of reference is still lacking among art historians, architects, architectural and geotechnical engineers. And while there are exemplary cases of an integral approach to each building element with its static and architectural function as a material witness to the culture and construction techniques of the original historical period, there are still examples of uncritical reliance on modern technology leading to the substitution from earlier structures to new ones preserving only the iconic look of the original monument. *Geotechnical Engineering for the Preservation of Monuments and Historic Sites III* collects the contributions to the eponymous 3rd International ISSMGE TC301 Symposium, Naples, Italy, 22-24 June 2022. The papers cover a wide range of topics which include: Principles of conservation, maintenance strategies, case histories, The knowledge, investigations and monitoring, Seismic risk, site effects, soil structure interaction, Effects of urban development and tunnelling on built heritage, Preservation of diffuse heritage, soil instability, subsidence, environmental damages. The present volume aims at geotechnical engineers and academics involved in the preservation of monuments and historic sites worldwide.
