F32june 2014 Paper:

Managing Credit Bubbles Alberto Martin,Jaume Ventura,2014-06-09 We study a dynamic economy where credit is limited by insufficient collateral and as a result investment and output are too low In this environment changes in investor sentiment or market expectations can give rise to credit bubbles that is expansions in credit that are backed not by expectations of future profits i e fundamental collateral but instead by expectations of future credit i e bubbly collateral During a credit bubble there is more credit available for entrepreneurs this is the crowding in effect But entrepreneurs must also use some of this credit to cancel past credit this is the crowding out effect There is an optimal bubble size that trades off these two effects and maximizes long run output and consumption The equilibrium bubble size depends on investor sentiment however and it typically does not coincide with the optimal bubble size This provides a new rationale for macroprudential policy A lender of last resort can replicate the optimal bubble by taxing credit when the equilibrium bubble is too high and subsidizing credit when the equilibrium bubble is too low This leaning against the wind policy maximizes output and consumption Moreover the same conditions that make this policy desirable guarantee that a lender of last resort has the resources to implement it *Enterprise and Organizational Modeling and Simulation* Joseph Barjis,Robert Pergl,2014-09-30 This book constitutes the proceedings of the 10th International Workshop on Enterprise and Organizational Modeling and Simulation EOMAS 2014 held in conjunction with CAiSE 2014 in Thessaloniki Greece in June 2014 Tools and methods for modeling and simulation are widely used in enterprise engineering organizational studies and business process management In monitoring and evaluating business processes and the interactions of actors in a realistic environment modeling and simulation have proven to be both powerful efficient and economic especially if complemented by animation and gaming elements The 12 contributions in this volume were carefully reviewed and selected from 22 submissions They explore the above topics address the underlying challenges find and improve solutions and show the application of modeling and simulation in the domains of enterprises their organizations and underlying business processes **Diesel Emissions and Their Control, 2nd Edition** W.
