Fermann, Almantas Galvanauskas, Gregg Sucha, 2002-10-25 Covering high energy ultrafast amplifiers and solid state fiber and diode lasers this reference examines recent developments in high speed laser technology It presents a comprehensive survey of ultrafast laser technology its applications and future trends in various scientific and industrial areas Topics include micromachining applications for metals dielectrics and biological tissue advanced electronics and semiconductor processing optical coherence tomography multiphoton microscopy optical sampling and scanning THz generation and imaging optical communication systems absolute phase control of optical signals and more *Super-Intense Laser—Atom Physics* A. L'Huillier, Bernard Piraux, Kazimierz Rzazewski, 2012-12-06 The rapid development of powerful pulsed lasers is at the origin of a considerable interest in studying the response of an atom a molecule or a solid to a strong electromagnetic field It is now possible to produce at the laboratory scale ultra short 13 pulses with a duration of 100 femtoseconds 10 second and a power of the order 12 of 1 terawatt 10 Watt Under these conditions very high peak intensities may be obtained and electric fields exceeding typical electron binding fields in atoms are generated The interaction of an atom or a molecule with such electromagnetic fields has a highly non linear character which leads to unexpected phenomena Amongst them above threshold ionization ATI i e the absorption of additional photons in excess of the minimal number necessary to overcome the ionization potential and its molecular counterpart above threshold dissociation ATD generation of very high harmonics of the driving field stabilization of one electron systems in strong fields These processes were the main topics of two international meetings which were held in 1989 and 1991 in the United States under the common name SILAP Super Intense Laser Atom Physics Laser Focus with Fiberoptic Technology, 1982 Lasers and Current Optical Techniques in Biology Giuseppe Palumbo, Riccardo Pratesi, 2007-10-31 The introduction of innovative light sources fibre laser sources and light emitting diodes is opening unexpected perspectives into optical techniques and is promising new exciting applications in the field of biomedicine Lasers and Current Optical Techniques in Biology aims to provide an overview of light sources together with an extensive and authoritative description of the optical techniques in bio medicine This book is designed to give biomedical researchers a strong feel for the capability of physical approaches promote new interdisciplinary interests and persuade more practitioners to take advantage of optical techniques Current developments in a variety of optical techniques including Near Infra Red Spectroscopy and traditional and advanced fluorescence techniques are covered ranging from those that are becoming common practice to those that need much more experimentation before they can be accepted as real breakthroughs Further topics include optical coherence tomography and its variations polarised light imaging and principle laser and lamp sources a usually fragmentary topic often dispersed among specialist publications The wide range of topics

covered make Lasers and Current Optical Techniques in Biology of interest to a diverse range of scientific communities

Frequency Measurement and Control Andre N. Luiten, 2003-07-01 This text on precision frequency measurement and its key enabling techniques includes reviews written by some of the most experienced researchers in their respective fields This text should prove useful to researchers just entering the field of frequency metrology and standards or equally well to the experienced practitioner

Atmospheric Attenuation of Laser Radiation from 0.76 to 31.25 Micrometers R. A. McClatchey, 1974 High resolution atmospheric transmittance curves are presented for the spectral region 320 to 13 200 cm⁻¹ 0.7576 to 31.25 micrometers These spectra are useful as a guide for selecting laser wavelengths for atmospheric propagation studies in this spectral region In addition this report provides attenuation coefficients for those lines of the CO HF DF and CO₂ laser systems which suffer the least atmospheric attenuation A new aerosol model is introduced here taking into account recent measurements of the complex index of refraction of aerosol particles Author
