Climate Change: Significance for Agriculture and Forestry David H. White, S. Mark Howden, 2013-06-29 Societies throughout the world depend on food fiber and forest products Continuity and security of agricultural and forest production are therefore of paramount importance Predicted changes in climate could be expected to alter perhaps significantly the levels and relative agricultural and forestry production of different nations over the next few decades Agriculture and forestry are also likely to influence the rate and magnitude of such change as they can be both significant sources and sinks of a number of greenhouse gases Adaptive management strategies therefore need to be formulated and implemented for these sectors to enable them to both adapt to future environmental change and to limit greenhouse gas emissions This book arose from an international workshop held in Canberra Australia under the auspices of the former IPCC Working Group III Agriculture Forestry and Other Human Activities Sub Group AFOS A number of leading speakers at the workshop were approached to encapsulate the concepts discussed and developed at this workshop The resulting papers make up this volume The book promotes a greater understanding of the major sources and sinks of greenhouse gases within intensive and extensive cropping and animal production systems and of agroforestry It highlights

the need to adopt a holistic systems approach to monitoring and reducing greenhouse gas emissions and assessing impacts and to integrate climate change related goals and activities with other issues such as biodiversity desertification and sustainable agriculture and forestry Corporate Average Fuel Economy Standards, Passenger Cars and Light Trucks, Model Years 2017-2025 ,2012 **Encyclopedia of the Anthropocene** ,2017-11-27 Encyclopedia of the Anthropocene Five Volume Set presents a currency based global synthesis cataloguing the impact of humanity s global ecological footprint Covering a multitude of aspects related to Climate Change Biodiversity Contaminants Geological Energy and Ethics leading scientists provide foundational essays that enable researchers to define and scrutinize information ideas relationships meanings and ideas within the Anthropocene concept Questions widely debated among scientists humanists conservationists politicians and others are included providing discussion on when the Anthropocene began what to call it whether it should be considered an official geological epoch whether it can be contained in time and how it will affect future generations Although the idea that humanity has driven the planet into a new geological epoch has been around since the dawn of the 20th century the term Anthropocene was only first used by ecologist Eugene Stoermer in the 1980s and hence popularized in its current meaning by atmospheric chemist Paul Crutzen in 2000 Presents comprehensive and systematic coverage of topics related to the Anthropocene with a focus on the Geosciences and Environmental science Includes point counterpoint articles debating key aspects of the Anthropocene giving users an even handed navigation of this complex area Provides historic seminal papers and essays from leading scientists and philosophers who demonstrate changes in the Anthropocene concept over time
