SEQUENCE OF OPERATION — 38AQ007 OUTDOOR UNIT WITH 40RMQ008 INDOOR UNIT

When power is supplied to unit, the transformer (TRANS) and crankcase heater (CCH) are energized.

Cooling — On a call for cooling, the thermostat completes the following circuits: R-G, R-Y, and R-O. If the compressor recycle delay of 3 minutes is complete, the compressor and outdoor fan start. The reversing valve is energized for cooling and the indoor-fan motor starts.

When the thermostat is satisfied, the circuits are opened, and the compressor, outdoor-fan motor, and indoor fan motor stop. The reversing valve is deenergized.

Heating — On a call for heating, the thermostat completes the following circuits: R-G and R-Y. If the compressor recycle delay of 3 minutes is complete, the compressor and outdoor fan start. The indoor-fan motor will also start.

If room temperature continues to fall, the thermostat completes circuit R-W. If the optional electric heat package is used, the heat relay is energized, and the electric heaters are energized.

When the thermostat is satisfied, the circuits are opened, and the compressor, outdoor-fan motor, heaters, and indoor-fan motor stop.

Defrost — The Defrost board (DB) is a time and temperature control, which includes a field-selectable time period between checks for frost (30, 50, and 90 minutes). Electronic timer and defrost cycle start only when contactor is energized and defrost thermostat (DFT) is closed (below 36 F [2.2 C]).

Defrost mode is identical to Cooling mode, except outdoor-fan motor (OFM) stops and a bank of supplemental electric heat (if equipped) turns on to warm air supplying the conditioned space. Defrost mode is terminated when the DFT reaches 31 F (19.6 C).

Low Ambient — Cooling head pressure control at low ambient conditions is accomplished through a low ambient relay and switch. The switch is factory set to close at 250 psig and open at 100 psig. In Heating mode, the low ambient switch is bypassed by normally closed contacts on the low ambient relay.

Air Circulation — When the fan switch is at FAN ON, the indoor-air fans operate continuously to provide ventilation. The thermostat operates the other components as described above.

Emergency Heat Cycle — If the compressor is inoperative due to a tripped safety device, the second stage of the thermostat automatically energizes the indoor-air fan and the electric resistance heaters (if equipped).
