Patent Wars Thomas F. Cotter, 2018-06-01 Patents are ubiquitous in contemporary life Practically everything we use incorporates one or more patented inventions and recent years have witnessed epic disputes over such matters as the patenting of human genes the control of smartphone design and technology the marketing of patented drugs and the conduct of patent trolls accused of generating revenue from nuisance litigation But what exactly is a patent Why do governments grant them Can patents simultaneously encourage new invention while limiting monopoly and other abuses In Patent Wars Thomas Cotter one of America's leading patent law scholars offers an accessible

lively and up to date examination of the current state of patent law showing how patents affect everything from the food we eat to the cars we drive to the devices that entertain and inform us Beginning with a general overview of patent law and litigation the book addresses such issues as the patentability of genes medical procedures software and business methods the impact of drug patents and international treaties on the price of health care trolls and the smartphone wars Taking into account both the benefits and costs that patents impose on society Cotter highlights the key issues in current debates and explores what still remains unknown about the effect of patents on innovation An essential one volume analysis of the topic Patent Wars explains why patent laws exist in the first place and how we can make the system better Advanced PET, SPECT, MR and Optical Imaging in Clinical and Pre-Clinical Research of Neuropsychiatric Disorders Boldizar Czeh,Zsigmond Tamás Kincses,Szilvia Anett Nagy,Nicola Toschi,2022-02-04 *Neural Implementations of Expertise* Merim Bilalić, Robert Langner,Guillermo Campitelli,Luca Turella,Wolfgang Grodd,2015-12-18 When we think about expertise we usually consider people who master tasks at a level not reachable by most other people Although we rarely realise it however most humans are experts in many aspects of everyday life This expertise enables us to find our way through a complex environment that is our life For instance we can instantly recognise multiple objects and relations between them to form a meaningful unit such as an office Thus research on expertise is not only important to investigate the cognitive and neural processes within an elite group but it is also a powerful tool to understand how everyone can acquire complex skills The goal of this Research Topic is to shed further light on the common and distinct neural mechanisms that implement various kinds of expertise We broadly define expertise as skill in any perceptual cognitive social or motor domain with the common core being optimised information processing due to knowledge acquired from repeated experiences Thus we are interested in the full range of mental processes modulated or modified by expertise from simple object or pattern recognition to complex decision making or problem solving in a particular domain These domains can range from everyday or occupational expertise to sports and rather artificial domains such as board games In all cases the aim should be to elucidate how the brain implements these sometimes incredible feats We are particularly interested in connecting cognitive theories about expertise and expertise related performance differences with models and data on the neural implementation of expertise We welcome original research contributions using the full range of behavioural neuroscience methods as well as theoretical methodological or historical reviews and opinion papers focusing on any of the above mentioned aspects **The Flowering Plants of Africa** ,2015 A magazine of colour plates with descriptions of flowering plants of Africa and neighboring islands
