The latest edition of *Immunobiology* is addressed to practitioners, researchers, and undergraduate and graduate students of medicine or biology. The textbook covers basic immunology, immunopathology, and clinical immunology. It begins with basic concepts in immunology and ends with fundamental principles of allergic diseases, autoimmunity, transplantation, and manipulation of the immune response. The updated version is interesting and has made it easier to understand the complexities of the immune system. The textbook contains a series of clear explanations of the immune system and many excellent, evidence based illustrations.

The book is divided into five sections. "Part One, Introduction to Immunobiology and Innate Immunity," includes the following chapters: "Basic Concepts in Immunology (Chapter 1)," "The Innate Immunity: The First Line of Defense (Chapter 2)" and "The Induced Response to Innate Immunity (Chapter 3)." The Part One contains the recent discovery of the innate sensing and innate immune responses and the latest findings on innate lymphoid cells.

"Part Two, The Recognition of Antigen" opens with a discussion of antigen recognition by B and T cell receptors (Chapter 4), followed by chapters on the generation of lymphocyte antigen receptors (Chapter 5) and antigen presentation to lymphocytes (Chapter 6). Chapter 4 discusses the antibody structure, the interaction of antibody molecule with specific antigen, antigen recognition by T cells. Chapter 5 deals with immunoglobulin and T cell receptor gene rearrangement and evolution of the adaptive immune response. Chapter 6 covers the generation of $\alpha\beta$ T cell receptor ligands and the major histocompatibility complex and functions.

"Part Three, Understanding T and B Lymphocyte Development," opens with an exploration of lymphocyte receptor signaling (Chapter 7) and ends with the development of B and T lymphocytes (Chapter 8). Comprehensive discussions and key issues relating to the cell signaling are highlighted at the beginning of Chapter 7. The last part of Chapter 7 deals with when a naïve lymphocyte encounters its specific antigen, co-stimulatory molecules, and inhibitory receptors on T and B cells. To help readers, the authors have included
