research to encourage student engagement and increase achievement for all learners *Teaching and Learning in the Digital Age* Louise Starkey, 2012 *Teaching and Learning in the Digital Age* is for all those interested in considering the impact of emerging digital technologies on teaching and learning. It explores the concept of a digital age and perspectives of knowledge pedagogy and practice within a digital context. By examining teaching with digital technologies through new learning theories cognisant of the digital age, it aims to both advance thinking and offer strategies for teaching technology savvy students that will enable meaningful learning experiences. Illustrated throughout with case studies from across the subjects and the age range, key issues considered include how young people create and share knowledge both in and beyond the classroom and how current and new pedagogies can support this level of achievement. The use of complexity theory as a framework to explore teaching in the digital age, the way learning occurs, one-way exchanges online and face-to-face interactions, learning within a framework of constructivism and in communities, what we mean by critical thinking, why it is important in a digital age, and how this can occur in the context of learning, how students can create knowledge through a variety of teaching and learning activities, and how the knowledge being created can be shared, critiqued, and evaluated. With an emphasis throughout on what it means for practice, this book aims to improve understanding of how learning theories currently work and can evolve in the future to promote truly effective learning in the digital age. It is essential reading for all teachers, student teachers, school leaders, those engaged in Masters Level work, as well as students on Education Studies courses.

E-Pedagogy for the Digital Age Dr. P. C. Nagasubramani, Adult learners have more options for enrolling in postsecondary education than ever before, and they are able to use their learning style preference in deciding which program best meets their needs. For some of these students, those programs are fully online, and for others, there is minimal use of technology. As technology grows and becomes more integrated into individual lives, the unique learning styles and preferences of adults need to be incorporated into instructional design. Drawing on a regional sample of US colleges, 545 adult learners in graduate programs were surveyed about how to effectively build community in their online classes. Results indicated some agreement with these instructional tools. Mature adult learners, however, were found to have stronger agreement with strategies that included work outside of the formal online class. These results suggest perhaps a greater comfort for adults in working in spaces where there is less likelihood of being judged or graded, and that they might value relational work with other students in different ways than younger adults.
