High Performance Scientific and Engineering Computing Hans-Joachim Bungartz, Franz Durst, Christoph Zenger, 2012-12-06 Since the creation of the term Scientific Computing and of its German counterpart Wissenschaftliches Rechnen whoever has to be blamed for that scientists from outside the field have been confused about the somewhat strange distinction between scientific and non scientific computations And the insiders i.e. those who are at least convinced of always computing in a very scientific way are far from being happy with this summary of their daily work even if further characterizations like High Performance or Engineering try to make things clearer usually with very modest success however Moreover to increase the unfortunate confusion of terms who knows the differences between Computational Science and Engineering as indicated in the title of the series these proceedings were given the honour to be published in and Scientific and Engineering Computing as chosen for the title of our book Actually though the protagonists of scientific computing persist in its independence as a scientific discipline and rightly so of course the ideas behind the term diverge wildly Consequently the variety of answers one can get to the question What is scientific computing is really impressive and ranges from the serious nothing else but numerical analysis up to the more mocking consuming as much CPU time as possible on the most powerful number crunchers accessible

Handbook of Research on Politics in the Computer Age Solo, Ashu M. G., 2019-08-30 Technology and particularly the Internet have caused many changes in the realm of politics Aspects of engineering computer science mathematics or natural science can be applied to politics Politicians and candidates use their own websites and social network profiles to get their message out Revolutions in many countries in the Middle East and North Africa have started in large part due to social networking websites such as Facebook and Twitter Social networking has also played a role in protests and riots in numerous countries The mainstream media no longer has a monopoly on political commentary as anybody can set up a blog or post a video online Now political activists can network together online The Handbook of Research on Politics in the Computer Age is a pivotal reference source that serves to increase the understanding of methods for politics in the computer age the effectiveness of these methods and tools for analyzing these methods The book includes research chapters on different aspects of politics with information technology engineering computer science or math from 27 researchers at 20 universities and research organizations in Belgium Brazil Cape Verde Egypt Finland France Hungary Italy Mexico Nigeria Norway Portugal and the United States of America Highlighting topics such as online campaigning and fake news the prospective audience includes but is not limited to researchers political and public policy analysts political scientists engineers computer scientists political campaign managers and staff politicians and their staff political operatives professors students and individuals working in the fields of politics e politics e government new media and communication studies and Internet marketing

Cloud Computing and Big Data C. Catlett, W. Gentzsch, L. Grandinetti, 2013-10-22 Cloud computing offers many advantages to researchers and engineers who need access to high performance computing facilities for solving particular compute intensive and or large scale problems but whose overall high performance computing HPC needs do not justify the acquisition and operation of dedicated HPC facilities There are however a number of fundamental problems which must be addressed such as the limitations imposed by accessibility security and communication speed before these advantages can be exploited to the full This book presents 14 contributions selected from the International Research Workshop on Advanced High Performance Computing Systems held in Cetraro Italy in June 2012 The papers are arranged in three chapters Chapter 1 includes five papers on cloud infrastructures while Chapter 2 discusses cloud applications The third chapter in the book deals with big data which is nothing new large scientific organizations have been collecting large amounts of data for decades but what is new is that the focus has now broadened to include sectors such as business analytics financial analyses Internet service providers oil and gas medicine automotive and a host of others This book will be of interest to all those whose work involves them with aspects of cloud computing and big data applications

Security Compliance in Model-driven Development of Software Systems in Presence of Long-Term Evolution and Variants Sven Matthias Peldszus, 2022-07-13 For ensuring a software system s security it is vital to keep up with changing security precautions attacks and mitigations Although model

based development enables addressing security already at design time design models are often inconsistent with the implementation or among themselves An additional burden are variants of software systems To ensure security in this context we present an approach based on continuous automated change propagation allowing security experts to specify security requirements on the most suitable system representation We automatically check all system representations against these requirements and provide security preserving refactorings for preserving security compliance For both we show the application to variant rich software systems To support legacy systems we allow to reverse engineer variability aware UML models and semi automatically map existing design models to the implementation Besides evaluations of the individual contributions we demonstrate the approach in two open source case studies the iTrust electronics health records system and the Eclipse Secure Storage

Optimization with PDE Constraints Ronald Hoppe, 2014-09-11 This book on PDE Constrained Optimization contains contributions on the mathematical analysis and numerical solution of constrained optimal control and optimization problems where a partial differential equation PDE or a system of PDEs appears as an essential part of the constraints The appropriate treatment of such problems requires a fundamental understanding of the subtle interplay between optimization in function spaces and numerical discretization techniques and relies on advanced methodologies from the theory of PDEs and numerical analysis as well as scientific computing The contributions reflect the work of the European Science Foundation Networking Programme Optimization with PDEs OPTPDE

Ubiquitous Mobile Information and Collaboration Systems Luciano Baresi,Schahram Dustdar,Harald Gall,Maristella Matera,2004-12-16 Over recent years most business processes have changed in various dimensions e g exibility interconnectivity coordination style autonomy due to market conditions organizational models and usage scenarios of information systems Frequently information is relocated within a geographically distributed system according to rules that are only seldom defined as a well coded business process This creates the need for a software infrastructure that enables ubiquitous mobile and collaboration systems UMICS The anywhere anytime any means paradigm is becoming the major challenge in conceiving designing and releasing next generation information systems New technologies like wi networks and 3rd generation mobile phones are offering the infrastructure to conceive of information systems as ubiquitous information systems that is systems that are accessible from anywhere at any time and with any device Ubiquity is not yet another buzzword pushed by emerging technologies but is mainly a means to support new business models and encourage new ways of working This new wave of UMICS will exploit the knowledge developed and deployed for conventional information systems but will also need new concepts models methodologies and supporting technologies to fully exploit the potentials of the enabling infrastructure and to be ready for the challenge Moreover people need to move across organizational boundaries and collaborate with others within an organization as well as between organizations The ability to query the company s distributed knowledge base and to cooperate with co workers is still a requirement but mobility brings new access scenarios and higher complexity

High Performance Scientific And Engineering Computing Michael Breuer,Franz Durst,Christoph Zenger,2012-12-06 In Douglas Adams book Hitchhiker s Guide to the Galaxy hyper intelligent beings reached a point in their existence where they wanted to understand the purpose of their own existence and the universe They built a supercomputer called Deep Thought and upon completion they asked it for the answer to the ultimate question of life the universe and everything else The computer worked for several millennia on the answers to all these questions When the day arrived for hyper intelligent beings the to receive the answer they were stunned shocked and disappointed to hear that the answer was simply 42 The still open questions to scientists and engineers are typically much simpler and consequently the answers are more reasonable Furthermore because human beings are too impatient and not ready to wait for such a long period high performance computing techniques have been developed leading to much faster answers Based on these developments in the last two decades scientific and engineering computing has evolved to a key technology which plays an important role in determining or at least shaping future research and development activities in many branches of industry Development work

has been going on all over the world resulting in numerical methods that are now available for simulations that were not foreseeable some years ago. However these days the availability of supercomputers with Teraflop performance supports extensive computations with technical relevance. A new age of engineering has started.
