Jill the Jellyfish

Jill was not like all of the other jellyfish. Jill hated her tentacles. She hated that she hurt people and other animals. Jill did not want to sting anyone. But sometimes, when she swam by them, one of her tentacles would get near a human or animal and sting them. This made them so mad at Jill, but Jill couldn't help it! Jill decided that she would only play with other jellyfish for now. She knew she couldn't play near the humans until she learned to control her tentacles. Her sister promised to help her learn how to control them. She could not wait to learn. She loved playing in the waves near the humans, but she didn't love hurting people.

Causes of High and Low Reading Achievement Ronald P. Carver, 2000-02-01 This book describes all of the important factors that cause some students to have low reading achievement and others to have high reading achievement. It concentrates on the main factors that influence how much a student gains in reading achievement during a year of school or a calendar year. An attempt is made to answer the following questions: what can educators do to increase reading achievement and what is beyond their influence? The author is directly concerned with achievement associated with normal or typical reading. The focus of the book is on things teachers can do during an entire school year that are likely to improve the reading level and reading rate of students, which in turn will increase their reading achievement. This effort to specify the most important causes of high and low reading achievement represents an integration of two disciplines of scientific psychology: experimental psychology and psychometrics. A glossary at the end of the book contains definitions of terms and concepts. Helpful appendices explain reading theory, the three laws of reading theory, and the equations that can be used to predict the accuracy of reading comprehension; provide conversions among units of reading rate; and list the numbered equations presented in the book.

Universal Principles of Design, Revised and Updated William Lidwell, Kritina Holden, Jill Butler, 2010-01-01 Universal Principles of Design, Revised and Updated is a comprehensive cross-disciplinary encyclopedia covering 125 laws, guidelines, human biases, and general considerations important to successful design. Richly illustrated and easy to navigate, it pairs clear explanations of every design concept with visual examples of the ideas applied in practice. From the 80/20 Rule to the Weakest Link, every major design concept is defined and illustrated. Whether a marketing campaign or a museum exhibit, a video game or a complex control system, the design we see is the culmination of many concepts and practices brought together from a variety of disciplines. Because no one can be an expert on everything, designers have always had to scramble to find the information and know-how required to make a design work. Until now, just a few of the principles that will broaden your design knowledge, promote brainstorming, and help you check the quality of your work. Baby Face Bias, Expectation Effect, Golden Ratio, Occam's Razor, Proximity, Scaling, Fallacy. The book is organized alphabetically so that principles can be easily and quickly referenced by name. For those interested in addressing a specific problem of design, the principles have also been indexed by questions commonly confronting designers: How can I help people learn from my design? How can I enhance the usability of a design? How can I make better design decisions? Each principle is presented in a two-page format. The first page contains a succinct definition, a full description of the principle, examples of its use, and guidelines for use. Side notes are included and provide elaborations and references. The second page contains visual examples and related graphics to support a deeper understanding of the principle. This landmark reference is the standard for designers, engineers, architects, and students who seek to broaden and improve their design expertise.
