

Nuclear fusion

1. Consider the reaction represented by the equation:

- a) Use the relative atomic mass data below to find the energy released when a tritium nucleus fuses with a deuterium nucleus.

$${}^3\text{H} = 3.016049 \text{ u}$$

$${}^2\text{H} = 2.014102 \text{ u}$$

$${}^4\text{He} = 4.002604 \text{ u}$$

$$n = 1.008665 \text{ u}$$

- b) How much energy would become available from the fusion of about 2 grams of deuterium with 3 grams of tritium?

2. A thermonuclear reaction is one which is caused by the energetic collisions of nuclei in a gas at very high temperatures. What temperatures would give the particles a mean translational energy of about 0.2 fJ, and thus enable the reaction to proceed?
3. In the Sun, fusion may take place between deuterium and tritium nuclei (see the equation in Q1). The total final mass of the particles is 5.0113 u. The energy released is $2.8 \times 10^{-12} \text{ J}$.
- a) Find the mass equivalent, in kg, of the energy released.
 b) Find the mass equivalent, in u, of the energy released.
 c) Use the answer to b) to estimate the total mass of the nuclei, in u, before fusion.
4. Two almost stationary deuterium nuclei (${}^2\text{H}$) can fuse to form a tritium nucleus (${}^3\text{H}$) and a proton. This releases energy of $6.4 \times 10^{-12} \text{ J}$.
- a) In what form is the energy released?
 b) Write an equation for this reaction.
 c) Calculate the ratio of the speed of the proton to that of the tritium nucleus.
 d) Calculate the ratio of the kinetic energy of the proton to that of the tritium nucleus.
5. The solar constant (the mean intensity of solar radiation arriving at the Earth) is 1.4 kW m^{-2} . If the mean distance of the Earth from the Sun is $1.5 \times 10^{11} \text{ m}$, what is
- a) the power of the Sun
 b) the rate of loss of mass of the Sun?
6. Calculate the energy in MeV released in the fusion reaction:

Use data from Q1 (${}^3\text{H} = 1.007825 \text{ u}$; $1\text{u} = 1.66 \times 10^{-27} \text{ kg}$)

Answers: Q1. a) 2.8 pJ b) 1.7 TJ Q2. 10^7 K Q3. a) $3.1 \times 10^{-29} \text{ kg}$ b) 0.0187 u c) 5.0300 u Q4. c) 3:1 d) 3:1 Q5. a) $4.0 \times 10^{26} \text{ W}$ b) $4.4 \times 10^9 \text{ kg s}^{-1}$ Q6. 4.03 MeV

Prevention, Detection and Response to Nuclear and Radiological Threats Samuel Apikyan, David Diamond, Ralph Way, 2007-12-14 Since the end of the Cold War the nuclear threats facing the world are dramatically evolving and have become even much more complex However the events of the past years have proved the necessity to reevaluate these threats on a level never before considered The need to prevent detect and respond to Nuclear Radiological threats leads to many requirements that are not met by current scientific technologies and scientific communities For this concern now we are aware and recognize the first that no single institution no single country possesses all the required assets to address these complex problems It will require the formation of international science and technology teams that combine multiple scientific disciplines and span from basic research to systems engineering and manufacturing the second that fundamental scientific challenges must be overcome to achieve new and improved technologies that effectively counter radiological and nuclear threats The primary goal of any counter terrorism effort is to prevent an attack as early in the development stages as possible Many current approaches employed to prevent a nuclear radiological attack rely upon detection of materials Another general category of threat reduction involves preventing acquisition or utilization of the materials Therefore while the organizers and participants of this meeting recognize that the Nuclear Radiological threats is extremely broad we necessarily limited the scope of this NATO Advanced Research Workshop and the programme focused on science and technology challenges associated with our need to prevent detect and respond to Nuclear Radiological threats The book can serve as a tool for communicating the outcomes of the workshop not only to the multi national scientific and technical communities engaged in combating nuclear radiological terrorism but also to those working at governmental and policy levels whose actions affect the directions the science takes and how the technology is incorporated into country specific national systems for combating nuclear radiological terrorism
