Sciences G. Arminger, Clifford C. Clogg, M.E. Sobel, 1995 Contributors thoroughly survey the most important statistical models used in empirical research in the social and behavioral sciences Following a common format each chapter introduces a model illustrates the types of problems and data for which the model is best used provides numerous examples that draw upon familiar models or procedures and includes material on software that can be used to estimate the models studied This handbook will aid researchers methodologists graduate students and statisticians to understand and resolve common modeling problems Scientific and Technical Aerospace Reports, 1983-07 **Researching Social and Economic**

Change David Rose, 2002-11 This is a guide to the purposes and potential of one of the most significant national and increasingly international resources for analyzing social change It explains the possibilities and pitfalls in the analysis of panel study data The Design of Low Noise Oscillators Ali Hajimiri, Thomas H Lee, 1999-02-28 It is hardly a revelation to note that wireless and mobile communications have grown tremendously during the last few years This growth has placed stringent requirements on channel spacing and by implication on the phase noise of oscillators Compounding the challenge has been a recent drive toward implementations of transceivers in CMOS whose inferior 1/f noise performance has usually been thought to disqualify it from use in all but the lowest performance oscillators Low noise oscillators are also highly desired in the digital world of course The continued drive toward higher clock frequencies translates into a demand for ever decreasing jitter Clearly there is a need for a deep understanding of the fundamental mechanisms governing the process by which device substrate and supply noise turn into jitter and phase noise Existing models generally offer only qualitative insights however and it has not always been clear why they are not quantitatively correct **Dynamic Measuring Systems** Sascha

Eichstädt, 2023-11-06 This book introduces the concepts at the basis of dynamic measuring systems vocabulary modelling calibration measurement data analysis uncertainty evaluation It also provides the mathematical foundations for signal processing stochastic processes and control theory necessary for the analysis of dynamic measurements Concepts and

practical approaches for dynamic calibration and dynamic measurement are introduced to the readership through concrete examples ranging from mechanical quantities and medical ultrasound to the Internet of Things IoT

Design of Very High-Frequency Multirate

Switched-Capacitor Circuits Seng-Pan U, Rui Paulo Martins, José Epifânio da Franca, 2006 Design of Very High Frequency Multirate Switched Capacitor Circuits presents the theory and the corresponding CMOS implementation of the novel multirate sampled data analog interpolation technique which has its great potential on very high frequency analog front end filtering due to its inherent dual advantage of reducing the speed of data converters and DSP core together with the specification relaxation of the post continuous time filtering This technique completely eliminates the traditional phenomenon of sampled and hold frequency shaping at the lower input sampling rate Also in order to tackle physical IC imperfections at very high frequency the state of the art circuit design and layout techniques for high speed Switched Capacitor SC circuits are comprehensively discussed Optimum circuit architecture tradeoff analysis Simple speed and power trade off analysis of active elements High order filtering response accuracy with respect to capacitor ratio mismatches Time interleaved effect with respect to gain and offset mismatch Time interleaved effect with respect to timing skew and random jitter with non uniformly holding Stage noise analysis and allocation scheme Substrate and supply noise reduction Gain and

offset compensation techniques High bandwidth low power amplifier design and layout Very low timing skew multiphase generation Two tailor made optimum design examples in CMOS are presented The first one achieves a 3 stage 8 fold SC interpolating filter with 5 5MHz bandwidth and 108MHz output sampling rate for a NTSC PAL CCIR 601 digital video at 3 V Another is a 15 tap 57MHz SC FIR bandpass interpolating filter with 4 fold sampling rate increase to 320MHz and the first time embedded frequency band up translation for DDFS system at 2.5V The corresponding chip prototype achieves so far the highest operating frequency highest filter order and highest center frequency with highest dynamic range under the lowest supply voltage when compared to the previously reported high frequency SC filters in CMOS
