Headlight switch closed, which activates R1 to provide power to Blue wire to headlight motors. Brown wires go to ground in black wire from R3 connector to radiator support where headlight wires also ground.

When doors are fully open, they contact inner limit switches on radiator support which opens blue wire circuit and grounds, Lt Grn & Purple motor wires. Brown wires are already grounded through R3 which is in the off position as is R2; if lga is turned on, R2 & R3 control wires are positive on both terminals so do not activate. Diode is in the brown wire near ign switch, it prevents voltage backflow to the ignition circuit when doors are closing or closed (light is off).
