

UNIT 5

TIMELINE

Interactions of Matter

In this unit you will study the interactions through which matter can change its identity. You will learn how atoms bond with one another to form compounds and how atoms join in different combinations to form new substances through chemical reactions. You will also learn about the properties of several categories of compounds. Finally, you will learn how nuclear interactions can actually change the identity of an atom. This timeline includes some of the events leading to the current understanding of these interactions of matter.

1828

Urea, a compound found in urine, is produced in a laboratory. Until this time, chemists had believed that compounds created by living organisms could not be produced in the laboratory.

1858

German chemist Friedrich August Kekulé suggests that carbon forms four chemical bonds and can form long chains.

1942

The first nuclear chain reaction is carried out in a squash court under the football stadium at the University of Chicago.

1979

Public fear about nuclear power grows after an accident occurs at the Three Mile Island nuclear power station located in Pennsylvania.
