Neural Plasticity for Rich and Uncertain Robotic Information Streams Andrea Soltoggio, Frank van der Velde, 2016-10-31 Models of adaptation and neural plasticity are often demonstrated in robotic scenarios with heavily pre processed and regulated information streams to provide learning algorithms with appropriate well timed and meaningful data to match the assumptions of learning rules On the contrary natural scenarios are often rich of raw asynchronous overlapping and uncertain inputs and outputs whose relationships and meaning are progressively acquired disambiguated and used for further learning Therefore recent research efforts focus on neural embodied systems that rely less on well timed and pre processed inputs but rather extract autonomously relationships and features in time and space In particular realistic and more complete models of plasticity must account for delayed rewards noisy and ambiguous data emerging and novel input features during online learning Such approaches model the progressive acquisition of knowledge into neural systems through experience in environments that may be affected by ambiguities uncertain signals delays or novel features

Communication, Cloud

and Big Data Hiren Kumar Deva Sarma, Prativa Rai, Samarjeet Borah, 2014-12-31 Analysis of big data is becoming a hot stuff for engineers, researchers and business enterprises now a days. It refers to the process of collecting, organizing and analyzing large sets of data to discover hidden patterns and other useful information. Not solely can massive information analytics assist to know the knowledge contained inside the information; however, it will additionally facilitate to determine the information that is most significant to the business and future business choices. Cloud computing is the type of computing that relies on sharing computing resources rather than having local servers or personal devices to handle applications. Cloud computing aims at applying traditional supercomputing or high performance computing power to perform tens of trillions of computations per second in consumer oriented applications such as financial portfolios to deliver personalized information to provide data storage etc. Since big data places on networks storage and servers requirements arise to analyse this huge amount data on the cloud. Even cloud providers also welcome this new business opportunity of supporting big data analysis in the cloud. But in the same time they are facing various architectural and technical hurdles. Therefore big data analysis in cloud attracting many researchers now a days. The National Conference on Communication Cloud and Big Data CCB 2014 organized by Department of Information Technology SMIT has received keen response from researchers across the country. Each paper went through reviews process and finally 30 papers were selected for presentation. The papers are an even mix of research topics from the fields of Communication Cloud and Big Data and its applications in various fields of engineering and science.
