Introduction to Transients in Electrical Circuits José Carlos Goulart de Siqueira, Benedito Donizeti Bonatto, 2021-08-13 This book integrates analytical and digital solutions through Alternative Transients Program ATP software recognized for its use all over the world in academia and in the electric power industry utilizing a didactic approach appropriate for graduate students and industry professionals alike This book presents an approach to solving singular function differential equations representing the transient and steady state dynamics of a circuit in a structured manner and without the need for physical reasoning to set initial conditions to zero plus 0 It also provides for each problem presented the exact analytical solution as well as the corresponding digital solution through a computer program based on the Electromagnetics Transients Program EMTP Of interest to undergraduate and graduate students as well as industry practitioners this book fills the gap between classic works in the field of electrical circuits and more advanced works in the field of transients in electrical power systems facilitating a full understanding of digital and analytical modeling and solution of transients in basic circuits

Real-Time Environmental Monitoring Miguel F. Acevedo, 2018-10-08 The natural environment is complex and changes continuously at varying paces Many like the weather we notice from day to day However patterns and rhythms examined over time give us the bigger picture These weather statistics become climate and help us build an understanding of the patterns of change over the long term Real Time Environmental Monitoring Sensors and Systems introduces the fundamentals of environmental monitoring based on electronic sensors instruments and systems that allow real time and long term data acquisition data logging and telemetry The book details state of the art technology using a practical approach and includes applications to many environmental and ecological systems In the first part of the book the author develops a story of how starting with sensors you can progressively build more complex instruments leading to entire systems that end with databases and web servers In the second part he covers a variety of sensors and systems employed to measure environmental variables in air water soils vegetation canopies and wildlife observation and tracking This is an emerging area that is very important to some aspects of environmental assessment and compliance monitoring Real time monitoring approaches can facilitate the cost effective collection of data over time and to some extent negate the need for sample collection handling and transport to a laboratory either on site or off site It provides the tools you need to develop employ and maintain environmental monitors
