Management of Chemical and Biological Samples for Screening Applications Mark Wigglesworth, Terry Wood, 2012-12-05. Filling an obvious gap in the scientific literature, this practice-oriented reference is the first to tie together the working knowledge of large screening centers in the pharmaceutical and biotechnological field. It spans the entire field of this emerging discipline from compound acquisition to collection optimization for specific purposes to technology and quality control. In so doing, it applies two decades of expertise gathered by several large pharmaceutical companies to current and future challenges in high-throughput screening. With its treatment of libraries of small molecules as well as biobanks containing biomolecules, microorganisms, and tissue samples, this reference is universally applicable for any molecular scientist involved in a large screening program.

Analytical Measurement Terminology Florence Elizabeth Prichard, Elizabeth Prichard, John Green, 2001. This unique handbook explains the most commonly used terminology and places each term in context. Concepts are described in a way that makes them meaningful to practitioners and in line with official definitions developed by international organizations.
