

# LUBRICATION CHART FOR CRAWLER TRACTOR (4- and 5-Roller)

## Section 40 TRACTOR TUNE-UP AND ADJUSTMENT

### Group 5

#### PURPOSE

Tune-up means making minor repairs and adjustments to an existing machine to improve its efficiency and operation of the tractor and its accessories. The procedure as outlined herein has proved to be most successful. Deviation from this sequence could result in misalignment and too many breakdowns.

Generally, the customer complaint will determine which system or part of the tractor should be checked first, but within the prescribed order of each system the sequence of checking and adjusting should be followed.

Most tune-up and adjustment procedures are the same for Model "40" Standard, "40" Tractor Type, and "40" Dozer Tractor. Where procedures are different for the various models they are described and illustrated in the paragraphs which follow.

#### FINAL INSPECTION

First, before even starting the tractor engine, a visual inspection can give definite clues to condition of tractor.

#### FUEL SYSTEM

Inspect the fuel system by beginning in the air cleaner. Note whether stack ring is partially clogged. Note also condition of air intake tube. Inspect condition of air cleaner mesh, and connections. If the proper amount of thoroughly cleaned air does not reach the combustion, performance of the engine is greatly affected.

Check fuel tank, lines, and connections for restriction or leakage.

#### COOLING SYSTEM

Inspect fuel filter for dirt and leakage between joints and body.

Inspect surfaces for evidence of any leakage of fueling and check condition of studs and flange face gaskets.

Check directly and under ground leakage for restriction or leakage.

Inspect for evidence of restricted leaks due to cracks or loose gaskets.

#### IGNITION SYSTEM

Note general condition of wiring, ground straps and caps. Check for oil-soaked, frayed or damaged insulation and excessive corrosion.

Check distributor for cracked cap, defective points, excessive dirt or grease.

Check battery for incorrect condition, cracked case, correct caps, amount of electrolyte, proper mounting and cable connections.

Inspect starter and generator for excessive dirt and grease, loose cables and worn wiring. Note whether cover bands are in place and securing is correct. Check condition and adjustment of generator drive belt.

#### COOLING SYSTEM

Inspect radiator grille for clogging or damage.

Look at radiator carefully for evidence of leaks, clogging of air spaces between fins and restriction of flow.

Inspect radiator hoses for "bumpy" condition.

Check cylinder head gasket and water tube and water connections for evidence of leakage.
