

OPERATOR'S CAB

CAUTION! A protective four-post roll-guard is incorporated in each operator's cab. On this construction, do not, under any circumstances, modify structural members of roll-guard by welding on additional parts, drilling holes etc. Disregarding this instruction can affect the rigidity of the roll-guard and therefore the operator's safety cannot be guaranteed.

The operator's cab provides excellent all-round visibility. Apart from this, the cab ventilation and heater system provides temperature control to keep the operator comfortable in any kind of weather.

The cab can be supplied with an air conditioning system (special equipment).

Ventilation and Heating

When fresh air is required, turn three-speed fan switch to position desired. Air flow can be directed by means of swiveling air outlets.

To switch on heating, turn heater switch to the left (anti-clockwise). To increase warm air flow, switch on fan. Quicker heating of the cab is obtained by opening air flaps.

Air Conditioning System (Special Equipment)

The blower switch must be turned on before switching on the air conditioning system. The air flaps must be open. The air conditioning switch is infinitely variable. For maximum cooling turn switch clockwise to end position.

Turning the heater on for a short period when operating the air conditioning system will help to control humidity. However, under normal conditions the heater temperature control switch should be in "Off" position when operating the air conditioning system.

- A — Three speed fan switch
- B — Infinitely variable heater switch
- C — Swiveling outlets for fresh and warm air
- D — Air flaps (for quicker heating of cab)
- E — Air conditioning switch (special eqpt.)
